U. S. MARINES IN BATTLE WITH CUBANS

SQUARE DEAL OR BOLT, A WARNING OF ROOSEVELT

Third Party Threat by the Colonel in Fiery New Jersey Speech.

"NO COMPROMISE FOR US!" Will Not Allow "Bosses to Upset the Will of the People."

ELIZABETH, N. J., May 25.—In a speech before the National Committee here tonight, Roosevelt declared that he would not allow "bosses to upset the will of the people."

His challenge carried with it a threat to get out and lead a third tier of committee, through the nomination, to President Taft.

Roosevelt's stinging speech came at the end of a day crowded with stirring campaign events. He spoke to a crowd of about 1,000 people who had gathered to hear him.

"Our opponents are a group of men who are not fit to lead the people," he said. "They are a group of men who are not fit to lead the people."

Roosevelt's speech was a warning to the people that he would not allow "bosses to upset the will of the people."

Freezing Cold in Mt. Vernon Prospekt

Our Old Friend Guildford is Back, But, Man Dearest, He Isn't Talking.

"The Hon. Curtis Guild, who we saw away some time back with applause and cheering and music by the band, to the surprise of all the Basins, who assumed everything at that time with his hand on his chest, that no-nothing could ever change him, came back last night a regular diplomat, cold, exclusive, dry."

"It may be due to the cold breeze that came from the Nova, but whatever the cause it will be all about with Curtis if he returns the new manner into a State-able campaign for the United States Senatorship."

The Ambassador is at the name of relation in St. Vincent street. "He isn't saying anything," a trim maid said to the honest working lady who was the bell.

"But now night try," said the person. "Then come the new old voice, but with strange new air in it."

"No," it said, "I won't see newspaper men."

Nevertheless, when the Ambassador is expected to come through before long with the announcement that he will not fight too strenuously against a unanimous nomination for Mr. Cramer's place.

Mayfield, in the meantime, some friends will tip that Curtis to the fact that they are about to try the direction of Senator and that there'll be nothing to do.

BYRNES QUIT LAW TO FIRE ENGINES

New Haven Official's Son, Determined to Learn Railroad-Ing, Starts at Bottom.

GOT HIS FIRST JOB "INCOG"

Praised by Superiors for Efficiency—Saved Ton of Coal a Day on Engine.

The word was passed out among the leopards and big game men at Harvard Law School yesterday that one of their former classmates had gotten his "sheepskin" up in a railroad engine at the Montpelier & Wells River railroad.

George Goodrich Byrnes, son of Vice-President Timothy C. Byrnes of the New Haven road, is the student of railroad who is going to his next step forward in learning his father's business about the same time the law colleges at Harvard are getting their diplomas.

As the students told it, young Byrnes quit Harvard Law to take up railroad work, so that some day he may be able to step into his father's shoes.

"George never did like the idea much of hanging his name out on a shingle," they told of young Byrnes. "He got out law coat and got a job firing one of the New Haven's old engines."

For the past year Byrnes has been known and people man on the New Haven of the Montpelier & Wells River railroad. His father is president of the latter road.

Graduated from Yale with honors, young Byrnes was his bachelor of philosophy degree at Old Hill in 1908. That fall he entered Harvard Law School. The first year he passed along swimmingly. Along in the middle of his second year during the midnight oil became monotonous. Law books were called dry as dust, so young Byrnes decided to tell his father about it.

30 Rebels Killed, 4 Americans Wounded Troops Land Tomorrow to Defend Havana Powerful American Armada Rushed to Cuba

U. S. MARINES BOARDING THE PRAIRIE FOR CUBA.

This picture shows United States marines boarding the transport at the League Island Navy Yard, Philadelphia.

BULLETIN.

The following wireless messages were sent from Cuba by the U. S. S. Prairie and relayed from Washington to the Charlestown Navy Yard last night:

First Company, 1st Brigade Marines landed. Engagement with insurgent negroes. Four marines seriously wounded. Thirty Cubans killed.

(Signed) DUNCAN, Operator U. S. S. Prairie, Santa Clara Province, Cuba.

U. S. Marines landed. Intend to enter and defend Havana by daybreak Monday.

(Signed) DUNCAN, Chief Operator U. S. S. Prairie.

POWERS CALLS MEETING

Sentiment Wins South Boston View on Land Swap.

The plan to have the State exchange its lease of the great tract of land in South Boston, south of Summer street, for the New Haven Railroad's lease of the Commonwealth docks will be discussed at a mass meeting at the South Boston High School building tomorrow night.

The meeting has been arranged by Senator James F. Powers of South Boston to get the sentiment of his constituents in regard to the proposed swap. A bill authorizing the exchange is now pending in the House.

"The South Boston Citizens' Association and the Andrew Square Improvement Association will be represented at the meeting."

RANDALL DEAN OF BROWN

Chosen at Meeting of the Board of Trustees.

PROVIDENCE, May 25.—Otho Everett Randall, connected with the teaching staff of the college for more than twenty years, was chosen dean of Brown University at a meeting of the trustees today.

ROOSEVELT AUTO VICTIM

Major Robbins Will Probably Die from His Injuries.

ATLANTIC CITY, May 25.—Major William H. Robbins of Farmington, a personal friend of Colonel Roosevelt, was killed today by the automobile of the latter's son, who was driving the car.

Roosevelt's son, who was driving the car, was killed today by the automobile of the latter's son, who was driving the car.

POEM BY MCARDNEY

Boston Man to Figure at Columbus Memorial Exercises.

In addition to the large representation of the Knights of Columbus of the city, the exercises of honoring the Columbus memorial at Washington on June 10th will have a distinguished presence given her in the choice, as poet of the occasion, of Daniel A. McCardney, the poet.

HOPE FOR WILBUR WRIGHT

Further Improvement in Condition of Aviator.

U. S. ARMADA FOR CUBAN SERVICE

Commander—Rear Admiral Osterhaus. Flagship—East Armored Cruiser Maryland.

Third Division, Atlantic Fleet—Battleships, Georgia, New Jersey, Rhode Island, Nebraska; in command of Admiral Fisk.

Fourth Division, Atlantic Fleet—Battleships Minnesota, Mississippi, Missouri, Ohio; in command of Captain Clark.

Hospital Ship Solace, naval tugs Patapsco and Patuxen, and colliers and transports.

Total Armed Force—2,700 marines and sailors on board fleet ready for landing on Cuban soil.

Hospital Head Gives Blood to Save Infant

Transfusion of blood in the case of a baby was successfully performed at the Framingham Hospital in New England.

John M. Merriam, president of Framingham Hospital, was the donor of the blood and the baby was the three-week-old child of a woman who had been in the hospital for some time.

Negro Rebellion Is Spreading Through the Whole Island. American Lives Are Imperilled and Property of United States Citizens Is Destroyed Cuban Government Powerless to Restore Order

WASHINGTON, May 25.—Aroused by confidential information that the real object of the insurrection that is sweeping over Cuba is the establishment of a sovereign negro republic like Hayti at the eastern end of the island, the United States took swift and drastic action today with the object of intervention.

Within three hours of the receipt of the information the most powerful fleet assembled by the United States for hostile service since the Spanish-American war received rush orders to proceed with all possible haste to Cuban waters. The fleet is prepared to land 2,700 sailors and marines with nine three-inch field guns on Cuban soil by Wednesday afternoon.

Two complete divisions of the Atlantic fleet are included in the movement. Three battleships of the third division, the Georgia, New Jersey and Rhode Island, under command of Rear Admiral Fisk, aboard the Georgia, were at Newport when they received orders to move at once. The battleship Nebraska is on its way up the coast from New Orleans.

All are now proceeding at top speed for New York, where each ship will embark sixty extra marines for service in Cuba.

The fourth division, including the battleships Minnesota, Mississippi, Missouri and Ohio, in command of Captain Clark, aboard the Minnesota, have left Newport for Hampton Roads.

In all 1,800 marines ready for active service will board the fleet when it drops anchor at Key West.

CAR CONDUCTOR IS RUN DOWN BY AUTO

A. R. French Struck by Doctor's Machine as He Was About to Board Car.

Arthur R. French, conductor of the East Weymouth Quaker, today was killed by a motor-driven car and run over by an auto mobile driven by Dr. S. W. Smith of South Boston, a graduate engineer, Quincy, Pa., at 2:30 yesterday afternoon. Dr. John S. Smith, who attended French later at Quincy, Mrs. Henshaw, says the conductor suffered a severe fracture of the back with possible internal injuries.

The doctor, who helped to take the injured man to the nearest physicians' office, and then to the hospital, later reported the accident to the Quincy police. He was allowed to go on his home errands. The police said that, from the story of witnesses, they do not attach blame to the Quaker.

At Graham's tavern, French left the car to pull the light on the back street. Then he walked toward the rear end of his car to step on the running board just as Dr. Smith's auto came along on the other track.

French was knocked into and was run over by both auto and car on the side of the street. He was immediately killed.

Dr. Smith, who was James Miller and Andrew Smith, of Quincy, Dr. Henshaw, of Boston City Hospital, and two other physicians, who had been called to the scene, and French to the office of Dr. W. J. Henshaw.

After a brief preliminary examination, which revealed no bones broken, the body was taken to the Quincy City Hospital. French is buried in the cemetery at Quincy, and in No. 100 Westchester street, Quincy.

TO HONOR KOSCIUSKO

Unveil Monument to Polish Patriot on May 30.

YONKERS, N. Y., May 25.—The monument to Thaddeus Kosciuszko will be unveiled May 30 in front of the Polish school and covers. The monument, erected by popular subscription, was the result of a subscription made Sunday, Jan. 29, 1911, in a sermon by Rev. Joseph J. Henshaw, pastor of St. Vincent's church. The unveiling will follow a parade in which many patriotic societies will take part.

THE QUEEN'S BIRTHDAY.

Salute of 45 Guns Fired in Mary's Honor.

LONDON, May 25.—Out of respect to the birthday of Queen Mary, whose forty-fifth birthday falls tomorrow, cannonades in her honor were held here. Salutes of forty-five guns were fired here and in other cities. The Queen received many beautiful and costly gifts.

DORA ROTHENBERG, WHO WILL BE BRIDE OF LIPMAN PITONOFF

MISS DORA ROTHENBERG
PHOTO BY J. E. PURDY

BROTHER OF GIRL SWIMMER TO MARRY

Four hundred invitations are out for the wedding of Miss Dora Rothenberg, of West Brookfield street, to Lipman Pitonoff, brother of Miss Rose Pitonoff, the champion girl swimmer, of Dorchester. The wedding will take place June 4 in St. Vincent's Hall, Bowdoin street, Dorchester.

The maid of honor will be Miss Ethel Rothenberg, sister of the bride. The bridesmaids will be Miss Rose Pitonoff, Miss Frances Jaskie of Washington, Miss Josephine, Miss Julia Galt, Miss Ethel Rothenberg, and Miss Rose Pitonoff.

The couple will sail about the middle of the month for a honeymoon in Europe. The wedding will be held at the home of the bride, 45 West Brookfield street, and will be attended by many guests.

PROTEST ILLITERACY TEST

Declare Immigrants Come Here for Improvement.

WASHINGTON, May 25.—On the ground that it is unreasonable, prominent Polish and Jewish organizations have made protests to the Secretary of Commerce and Labor against the literacy test provided in the billing immigration bill. The organizations contend the test is unfair to their countrymen. They come to this country for an education, the organizations say, and should not be barred by lack of the things they seek.

TEXTILE STRIKERS TO GREET HAYWARD

Mechanicsville Parade and I. W. W. Speeches Planned for Tomorrow.

MECHANICSVILLE, May 25.—A mass meeting of the striking employees of the French River Textile Company will be held tomorrow at West Thompson, when plans will be made for a demonstration and parade through the streets of this town Monday afternoon. Addresses will be delivered in the evening at the home of Mrs. L. J. Berry of San Francisco and Mrs. L. J. Berry of New Bedford. Plans will be made for the arrival of William Hayward, Gen. E. W. W. leader, who is expected here Thursday or Friday.

More than 1,000 men and women are affected by the strike, which started last Wednesday. They demand a 5 per cent increase for an undivided shift, and the failure of the company to meet the terms of the strike was the cause of the strike.

It was announced at a meeting of the strikers today in Forester's Hall that the strikers will not be out until after the strike is without justification. With the strikers' fight against the strike and heavy wages taken from the strikers, London already has some of the appearance of a besieged city.

The full effect of the transport workers' strike will not be felt until after the strike is without justification. With the strikers' fight against the strike and heavy wages taken from the strikers, London already has some of the appearance of a besieged city.

120,000 MEN ARE OUT IN BIG DOCK STRIKE

Carters Enter Fight and Food Spoils Aboard Steamers—Prices Going Up.

LONDON, May 25.—The dock workers' strike today was complicated by the walk-out of the carters, and it is now estimated more than 120,000 men are out. London's transport industry is almost dead, and the situation is becoming worse because of the steady rise in the price of foodstuffs. There are not at the docks more than 120 vessels loaded with food supplies, but there are a few in the docks that are not carrying them.

Will Poll Lowell Workers on Strike

LOWELL, May 25.—Next week 10,000 cotton operatives affiliated with the I. W. W. will poll a vote on the question of striking again to force the Merrimack Manufacturing Company, as the operatives say, to live up to the time-and-a-quarter agreement for overtime at the noon hour in a plant works.

The strike vote will be polled by nationalities on the following nights: Monday, Portuguese and Lithuanians; Tuesday, Poles, Armenians and Turks; Wednesday, Greeks and Syrians; Thursday, Belgians; Friday, Franco-Americans and English-speaking.

AVIATORS TO STRIKE FOR HIGHER WAGES

BERLIN, May 25.—The German professional aviators have unanimously decided to strike tomorrow if the demand of the German Aviators' Union for a minimum of \$15 monthly, which was presented to the airplane construction companies, is not granted. Tomorrow is the principal day of the big national aviation week. Some aviators get only \$37.50 a month.

FITZGERALD ON TEXT SENATOR, FOSS SAYS

So the Mayor Whispers to the Governor Name of the Next President.

Governor Pitts with John F. Fitzgerald for the Fall State Senate.

He said so yesterday afternoon at an extended conference with the Mayor, in which the Senatorial situation was frankly discussed.

According to Boston Currents, which is the Republican organ at the seat of Senator Chas. according to the Mayor, he believes it is being arranged for Pitts to get the Republican nomination.

There is a contest in Washington to discover which has dictated the policy of the Republican party in Massachusetts, the State or the Governor.

The Governor believes that Pitts will be an easy man to defeat. He thinks that the Mayor will have little or no difficulty in carrying Massachusetts provided the Legislature passes the bill which permits the voters to express their preference. He has no intention to become a member of the Senate himself, and he told the Mayor that he could count upon him for most hearty and cordial support.

Study Election Figures. Incidental to the conference was a long perusal of the figures of the last national election. The Mayor, who is credited with being exceptionally apt at analyzing election figures, pointed out in which states the Democratic vote fell four years ago, and in which States the Democratic party can be expected to carry in the next national election.

At the conference it was decided that Pitts will be the Democratic presidential nomination. The Governor, who is a Republican, said that the Democratic ticket in the next election will be a new one, and that the Governor will be a new man.

The Governor, who is a Republican, said that the Democratic ticket in the next election will be a new one, and that the Governor will be a new man.

DANIEL J. McDONALD FOR MURRAY'S SEAT

Councillor to Have Kellogg's Support Against Charles-town's Boy Congressman.

Councillor Daniel J. McDonald of Charlestown is an avowed candidate for Congress from the Ninth Congressional District.

He will oppose Congressman William F. Murray for reelection and he will have the support of all commoners opposed to the Democratic city machine and to Mayor Fitzgerald.

While the Charlestown man has been frequently mentioned as a possible candidate against the Ninth District Congressman, it was not until the past few days that he definitely decided to contest for the nomination.

The entry of McDonald into the race for Congress is one of the most active and aggressive in the past few days. He is a member of the State House and is a member of the State Senate.

He is a member of the State House and is a member of the State Senate.

He is a member of the State House and is a member of the State Senate.

Legislature's Record for 1912 Grand Trunk Bill Pending Yet

As a matter of fact, the record for 1912, as you look it over—and considering that we are still waiting for the Senate to have done with the Grand Trunk bill—looks altogether good. Here's a little list of what the Massachusetts legislators did, and another showing what they wouldn't do.

Unless Governor Foss sets his foot down, and tells them they may, the members of the Legislature expect to put the State House shutters up sometime this week—they talk of Wednesday—and go back to home cooking. The Governor talks some of keeping the lawmakers in Boston "until they have passed a Public Utilities bill."

Some of the lawmakers say that in this event they expect to be around here in time to see the session of 1913 begin.

However that may be, the Legislature of 1912 will leave behind it a record which, considering the Republican majority, looks altogether progressive.

There is still pending the Grand Trunk bill, petitioned for by thousands upon thousands of Massachusetts business men, Boards of Trade and Chambers of Commerce. The Grand Trunk bill has been passed by the House and held up in the Senate.

Here is an interesting summary of some of the things the Legislature did and some of the things it wouldn't do:

GOOD THINGS DONE. Ratified the proposed amendment to the national constitution for the purpose of securing the direct vote of the people.

Passed the bill to permit the voters to express their preference for President and Vice President, and to elect members of Congress, at national conventions of political parties.

Adopted resolutions in advocacy of a public park.

Agreed to an amendment to the State constitution for the purpose of the reference of legislative questions to all of the voters of the State on the question of reformation.

Reorganized the State into congressional districts, in accordance with the results of the last census.

Provided maximum penalty of \$1000 for the making of a false statement by a public officer.

Passed the Hiram Allen Memorial Bill, to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

Passed the bill to provide for the establishment of a public library for the purpose of the collection of books and manuscripts.

LINE ARE DRAWN AGAINST COUGHLIN

Mayor Said to Have Decided on John F. McDonald for National Committeeman.

Dr. John W. Coughlin of Fall River, Democratic national committeeman for Massachusetts, will have his service in that capacity very soon unless present indications are misleading.

John F. McDonald, former chairman of the State Committee, will be the successor, according to the plans of the Massachusetts delegation to the Democratic national convention at Baltimore.

Back of the proposed slate of Dr. Coughlin is a keen fight between Governor Foss and Mayor Fitzgerald, and the latter is credited with having the winning edge.

McDonald will receive the support and endorsement of the State Committee, which will have the support of the delegates.

An attempt has been made to have the matter decided before the delegates meet at Baltimore on June 22, but it seems certain that the election of a national committeeman will be deferred until the delegates reach the convention city.

The position of national committeeman under a Republican national administration is a very important one. It will be the duty of the national committeeman to select those who will receive favors at the hands of the national administration.

Dr. Coughlin is a man who has been elected to the State House and is a member of the State Senate.

Courts Defeat New County Expense Plan

Measure to Make Chances, Revere and Winthrop Help Pay Bills Is Unconstitutional.

The Supreme Judicial Court has declared the measure a provision passed by the Massachusetts Legislature in 1910 which provides for the apportionment of three districted commissioners and one district of Suffolk County, to apportion the expense of Suffolk County among the city of Boston, the city of Chelsea and the towns of Revere and Winthrop. The court holds the measure unconstitutional on the ground that it is a violation of the constitution.

Under an agreement between Boston and Chelsea in 1881, Boston has paid the cost of the county and has had entire control of county affairs. On account of the growth of Chelsea, Winthrop and the towns of Revere and Winthrop, the court holds the measure unconstitutional on the ground that it is a violation of the constitution.

PAGEANT TO SHOW AMERICA'S HISTORY

So the Mayor Whispers to the Governor Name of the Next President.

Unique and appropriate memorial scenes will take place next Thursday afternoon in Franklin Park for the lawns near Schoolmaster's Hill, where 500 boys, girls and young people will present a pageant representing the march of time in America from the landing of the Pilgrims. These young people will be in the costumes of various nations that have found a home in the Land of the Free.

The pageant is given under the auspices of the Boston Social Union, an organization composed of delegates from all of the Boston social settlements. Every Day Now Your Furs Are In Danger

From SPRING SUNSHINE and HEAT INDOORS which dries up the natural oils, from DUST and DIRT, breeders of moths, from MOTH DAMAGE, from LOSS by FIRE, BURGLARY, THEFT. Against all these, Filene's Cold Storage protects you, and in addition it includes without extra charge BLOWN-AIR CLEANING, an innovation for cleaning furs. FILENE'S IS THE ONLY STORE IN BOSTON WITH A PLANT FOR BLOWING-AIR CLEANING.

Photograph Taken in Our Own Plant for Blown-Air Cleaning

As is shown from the negative shown in the picture under 80 to 100 point present, regulated to suit the kind of furs being cleaned. It blows out every particle of dust, dirt or moth egg. This is a big improvement for cleaning furs, there is no danger of burning the hairs, buttons or of burning the pelts as sometimes happens under the whipping process.

FILENE'S THE BEST COLD STORAGE FOR FURS

CHARGES 3% (WITH MINIMUMS FOR EACH SMALL PIECE AND EACH POLICY) INCLUDE:
Cold Dry Air Storage until wanted, or until Jan. 1, 1913.
Protection against any damage from moths.
Protection against loss by fire (see the terms of contract), burglary, theft, etc.

Furs called for and delivered free, within ten miles.
—And Blown-Air Cleaning—an innovation—without extra charge.

Filene's Cold Storage for Furs is so Convenient, so Satisfactory, so Economical that you can't afford to keep your furs at home.

If May Had Come in Smiling

Instead of frowning, and shrinking, and weeping, you would have witnessed nearly a month earlier this presentation of
New Summer Styles—Largest Freshness in Boston.

For we were ready—ready when other stores were fussing with Spring togger.

But the postponement helps—weeping weather has opened up wonderful purchasing opportunities—and now comes the added advantage of stock-taking, just completed, an event that always bestows economies lavishly.

So let others deal in things that belong to a passing season. Filene's is Ready for Summer—ready as never before—ready with values that will leave light loads for our moving day.

Ready Monday morning when the key click in the locks. Ready with much more than this page can tell.

One of the most notable offerings of tomorrow (only trouble is the limited quantity) are these

200 New Summer Dresses

Not Only New—Especially Priced

100 Showerproof Foulard and Silk Serge Dresses, 1.00 to 7.50, worth 15.00 and 18.50, at 8.75

64 Basement Lots Whose Prices Reflect the Market Conditions of the Past Two Months

THE Basement is crowded with opportunities like these in addition to the lots that come here in the regular course of business, because of two months of rainy and cool weather, which has left manufacturers with overstocks of materials and made-up garments.

The prices to you are as advantageous as were the prices made to us by manufacturers to relieve their overstocked conditions.

Every lot that comes to the Tunnel Bargain Basement must be a bargain because of the AUTOMATIC PRICE REDUCTION SYSTEM. The backward season gives an added reason for bargains and makes prices even more extraordinary than ever.

MANY LOTS NOT ADVERTISED HERE JUST AS EXTRAORDINARY AS THESE—FOR MONDAY, MAY 27.

SUITS—Women's Sample Suits, trimmed models, 25.00 to 42.50 values, automatically reduced to 18.56 to 24.75

By leaving a larger amount of bonds than of stocks, the community would get the benefit of a larger amount of money.

It has been found in many parts of the country that money could be raised at less cost through the issue in large proportions of bonds, and some of our best railroads have been developed on this plan, notably the Chicago, Burlington & Quincy.

Large Issues a Menace.

It is undoubtedly safer for security holders to have long-term bonds issued than to have large amounts borrowed

The proposed provision presents a different question when it is applied to existing railroads.

of educational bonds were issued through the pull of the market. The bonds were sold by the New Haven City and County Educational Bonds Authority, which is a separate entity from the city and county governments. The bonds were sold to the public through a competitive bidding process. The bonds were sold at a discount to face value, and the interest rate was set at 5.5 percent. The bonds were sold for a total of \$10 million. The bonds were sold to the public through a competitive bidding process. The bonds were sold at a discount to face value, and the interest rate was set at 5.5 percent. The bonds were sold for a total of \$10 million.

These three provisions so far as they affect the Internal Revenue and revenue for careful consideration and action at the next session of the Legislature and amendments of the general law as may be necessary both to protect the bondholders and to protect the creditors and enhance the interests of these companies.

APPELLATE COURT WILL END DELAYS

New Law Strikes at Abuse of
Appeal From City Judges'
Rulings.

The appellate division of the supreme court of Massachusetts will end the delay in the trial of cases appealed from the city judges' rulings. The new law, which was passed by the legislature last session, will take effect on the first of July. It will require the appellate court to hear and decide all appeals from the city judges' rulings within a fixed period of time. This will prevent the delay which has been the cause of much dissatisfaction with the present system.

Many Cases to Handle.
The new system was devised and recommended by the commission on judicial administration. It was approved by the legislature last session. The appellate court will now be able to handle a large number of cases which have been pending for a long time. This will be a great relief to the city judges and to the public.

Puts Counsel on Honor.
The new law will also put the counsel on honor. It will require the counsel to appear in person at the trial of the cases. This will prevent the delay which has been caused by the failure of the counsel to appear.

REPAIR HOWLAND HOUSE

Plymouth Mansion of Pilgrims to Be Open to Public.

PLYMOUTH, May 25.—The old Howland house, owned by John Howland, one of the original Pilgrims, has been offered as a place for the reception of the public. The house is in a state of ruin and needs to be repaired. The city of Plymouth has agreed to purchase the house and to have it repaired.

INSANE MAN BEATS GUARDS

Joseph King Makes Escape from Hospital at Howard, R. I.
PROVIDENCE, May 25.—Joseph King, an insane man, has made his escape from the hospital at Howard, R. I. He was seen running through the woods near the hospital. The guards were unable to catch him.

Confirmation by Bishop.
The Rev. Joseph G. Anderson, rector of the church of the Holy Trinity, has confirmed the marriage of Mr. and Mrs. John King. The ceremony took place in the church on May 24.

Yes—that's Dandruff!
and it is going to become more annoying every day until you begin to use HAY'S HAIR HEALTH.
Then you'll see the Dandruff disappear entirely from your scalp. HAY'S HAIR HEALTH will keep it out and keep your scalp clean and your hair healthy.

Don't delay—start now and be one of the thousands of grateful users of it.
"I wish to recommend the very high quality of HAY'S HAIR HEALTH and tell you that I have secured no remedy of Dandruff and itching scalp so good as this for the last three years have used it."
GEO. W. JAMES, Chicago, Ill.
\$1.00 and 50c in drug stores or direct upon receipt of price and dealer's name. Send for color booklet—HAY'S HAIR HEALTH, N. Y.

WE WILL MAKE YOU \$1
in 10 days if you will use HAY'S HAIR HEALTH. We will pay you \$1.00 if you will use HAY'S HAIR HEALTH for 10 days and it does not cure your Dandruff and itching scalp. Send for color booklet—HAY'S HAIR HEALTH, N. Y.

RECORD'S VITAL
RESTORATIVE
The only medicine that will restore the vitality of the system. It is the only medicine that will cure the most stubborn cases of Dandruff and itching scalp. Send for color booklet—RECORD'S VITAL RESTORATIVE, N. Y.

Technology Has First Volcano Observatory

Professor Jaggar to Make Notes On
Coming Eruption of Mauna Loa
In Hawaii.

Professor Thomas A. Jaggar of the department of geology at Massachusetts Institute of Technology will sail next month for Honolulu, to begin a watch over the disturbances in Mauna Loa, one of the most famous of the world's volcanoes. He will be the first American to do so.

Professor Jaggar has a special honor of distinction. He is the first American to be elected a member of the Hawaiian Academy of Science.

He will be accompanied by a party of geologists and geographers. They will make notes on the coming eruption of Mauna Loa.

Professor Jaggar has been working on the geology of the Hawaiian Islands for many years. He has made many important discoveries.

He will be the first American to make notes on the coming eruption of Mauna Loa. This will be a great honor for him.

Why Are Mutt and Jeff So Popular With All? Because They're Human, Answers Harvard Man

MUTT ISN'T EVEN AFRAID OF THE MAN WHO CREATED HIM—HE HANDS "BUD" ONE

"Mutt and Jeff are very popular because they are human. They are not perfect, but they are like us. They have faults, but they are also good. They are the only cartoon characters who are so popular with all people."

"The secret of their success is that they are human. They are not perfect, but they are like us. They have faults, but they are also good. They are the only cartoon characters who are so popular with all people."

DR. HIGGINS, SURGEON, IS GRANTED DIVORCE

Grounds: Cruelty and Neglect

Dr. Higgins, a prominent surgeon, has been granted a divorce by the court. The grounds for the divorce are cruelty and neglect. The court found that Dr. Higgins had been cruel and neglectful to his wife.

The divorce was granted without a trial. The court accepted the findings of the judge who heard the case.

Our Optical Department

**Is Now in Charge of a Competent Man
Whose Services Are at Your Command**

what strength glasses will help you most. If you need the help of an oculist, you will be so informed. If rest glasses or sight glasses will relieve you, the work will be done here perfectly, and at less than such service would cost outside of this store.

EYE TESTING—the most scientific—will be done without charge.

We intend this shall be a part of the more service of which we shall be a bit proud.

In reliability and low pricing we believe this new department will perform a real service in the community.

LEVANZIN'S DIARY TELLS OF STARVING

Remarkable Story, Day by Day, Is Recited by Noted Scientist.

Professor Aristide Levanzin, a noted scientist, has just published his diary, "The Starving Man," which tells of his experience during his imprisonment in the laboratory of the Carnegie Institute. It is a remarkable story, day by day, of the sufferings of a man who was starved for the purpose of determining the limits of human endurance.

By AGOSTINO LEVANZIN

I was taken to the laboratory of the Carnegie Institute, where I was to be starved. The experiment was to determine the limits of human endurance. I was to be starved for a period of ten days, during which time I was to be kept in a room with no food or water. The experiment was to be conducted in a room which was to be kept at a temperature of 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water.

A Sensitive Barometer

The first day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water. The first day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water.

No Pangs of Hunger

The second day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water. The second day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water.

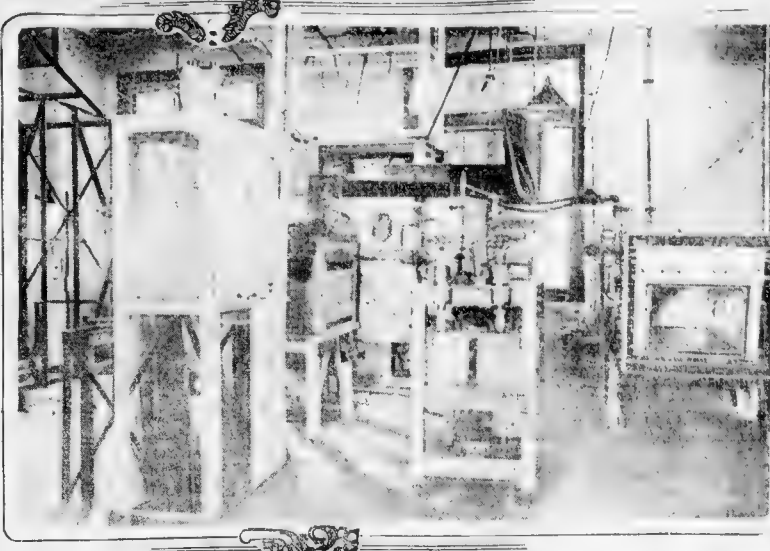

Worried by Treatment

The third day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water. The third day of the experiment was a day of great suffering. I was kept in a room with no food or water. The temperature was kept at 60 degrees Fahrenheit. I was to be kept in this room for ten days, during which time I was to be kept in a room with no food or water.

Famous Old Mansion House Makes Ice Cream Slightly

The history of the Mansion House of Cambridge, built over two centuries ago, is a story of the growth of the ice cream business. The Mansion House, which was built in 1630, was the first ice cream parlor in Cambridge. It was built by the first Lord of the Manor, and it was the first place where ice cream was sold. The Mansion House, which was built in 1630, was the first ice cream parlor in Cambridge. It was built by the first Lord of the Manor, and it was the first place where ice cream was sold.

Prof. Levanzin and the Carnegie Institute Experiment Room Where He Was Starved

Calorimeter room at the Carnegie Institute, where Prof. Levanzin was starved. The picture shows him when he was about 100 pounds, and the picture shows him when he was about 150 pounds.

Dr. Cabot Explains Results at Laboratory

By DR. RICHARD C. CABOT

Dr. Cabot, a member of the Massachusetts General Hospital, and a member of the Harvard Medical School, has just published his diary, "The Starving Man," which tells of his experience during his imprisonment in the laboratory of the Carnegie Institute. It is a remarkable story, day by day, of the sufferings of a man who was starved for the purpose of determining the limits of human endurance.

Must Know Body's Work.

In order to be intelligent as to the work of the body, it is necessary to know the work of the body. The body is a complex machine, and it is necessary to know the work of the body in order to be intelligent as to the work of the body. The body is a complex machine, and it is necessary to know the work of the body in order to be intelligent as to the work of the body.

Given Purified Air

The most important thing in the experiment was the air. The air was purified, and it was given to the man who was starved. The air was purified, and it was given to the man who was starved. The air was purified, and it was given to the man who was starved.

Make *Both* Sides of Your Dollar Work In a New York Hotel

AN advertising expert, when he saw the title to this announcement, said you wouldn't read it. "Visitors to New York," he remarked, "are not interested in saving money. They come here to spend it. You should show a pretty picture of some part of the hotel decorated in tapestries and ornamental brass. The more expensive it looks the greater the attraction." But *we* believe you are demanding *more* for your money now than you ever did before.

Railway representatives tell us that the saving of *one cent* a mile in transportation costs will influence the business of a whole community, yet your railroad ticket represents but a small part of your traveling expenses.

There may still be people who come to New York to glitter and shine, and who are willing to pay for the sensation. But the majority of substantial American travelers, acknowledged the most *liberal spenders* in the world, are beginning to sandpaper the gilt and determine *real* values.

High prices are making critical buyers of us all. People who once abandoned substance for show now require less display and more utility. Gratifying the pride of luxury is not half so important as supplying necessary comforts and conveniences—and supplying them at a *reasonable price*.

The Martinique is the *one* hotel in New York planned and equipped to meet present day needs, because it provides the highest standard yet attained in hotel comforts, and at a cost never before attempted.

People Were Once Satisfied With a Room Just Large Enough to Sleep In and Accommodate a Trunk.

Now they send for floor plans, make comparison of the size of rooms, the location, and many other important details that travelers a few years ago ignored, because they had been led to believe by custom that all good hotels were alike.

The Martinique is distinctive as the latest work of one of the most distinguished hotel architects in America—the man who designed the best known hotels in the world. Many of its features are *new even to New York*.

In the construction and interior arrangement of the Martinique there has been no attempt at grandeur or ostentation.

When things fantastic or frivolous are added you have to pay for them whether you really enjoy them or not, and prices must be charged that are out of all proportion to the *real* comforts provided.

Men and Women Appreciate More of the Warmth of Home in a Hotel Nowadays and Less of the Atmosphere of a Royal Court.

The Martinique has been called the most homelike hotel in New York. We are sure you will find this to be true, because we have directed our efforts to make it so.

The living apartments at the Martinique are cheerful and well proportioned; equipped with tasteful, appropriate furniture, just as they would be in a well appointed dwelling.

We have never believed you could take so much stone and so much furniture and produce a hotel any more than you can a home. It is the thoughtful and courteous attitude of the employees who serve you that gives to formal furnishings an atmosphere of good cheer and friendliness.

Many of our employees have grown up in our service. This makes a great difference in the possible comfort of a hotel.

The More Experienced Traveler You Are the More You Will Appreciate These Prices

Room equipped with hot and cold running water, convenient bath—NO CHARGE for bath privilege	\$2.00
Room with private bath	2.50 and 3.00
The largest, most attractive outside room in the Martinique, with double bed and private bath	4.00
When occupied by two, the only additional charge (this is an innovation)	.50

The Martinique is one of the largest hotels in New York—600 rooms. It is advisable to send us your reservation two days in advance of your arrival. There is absolutely no obligation on your part, if circumstances prevent your coming.

May we send you an illustrated and descriptive booklet?

The Martinique is the most *conveniently situated* hotel in New York.

The Hudson Tubes, which connect with the D. L. & W., the Erie and the Lehigh Valley railroads, operate trains to bring you quickly to the 33rd Street Station, which is directly opposite our Broadway entrance.

The Pennsylvania Station is one block from the Martinique.

The Grand Central Station is only six minutes away.

Five of the leading Department Stores are only one block from the Martinique.

Twenty of the principal theatres, where you will see all the good shows, are centered around the Martinique, within five minutes' walk.

Fashionable Fifth Avenue and its exclusive shops are one block from the Martinique.

All of the principal car lines pass the door.

This Is An Important Consideration.

When you come to the Martinique you save much of the time of a business day because you can get to and from commercial centers rapidly and comfortably. If you come for pleasure, then you are in a location which tends to lengthen the possibilities of pleasure.

You will especially appreciate the care and attention we give your wife or daughter when traveling alone. An experienced corps of rooming *maids* are employed to look after the comfort of ladies, instead of the ordinary way of leaving such work to bell boys.

You want to realize the satisfaction of knowing that you are getting *everything* to which you are entitled for your money. Write us today. We will show you in detail how you increase the purchasing power of your dollar when you come to the Martinique.

HAND-TO MOUTH POLICY

This Is Said to Be Characteristic of the Business Situation

1. The first step is to identify the main components of the system. This includes the input, output, and internal state variables.

2. The second step is to define the relationships between these components. This is typically done using a set of equations or a state transition diagram.

3. The third step is to analyze the system's behavior. This involves studying the system's response to different inputs and initial conditions.

4. The fourth step is to design the system. This involves determining the values of the system parameters and the structure of the system.

5. The fifth step is to implement the system. This involves building a physical or software model of the system.

6. The sixth step is to test the system. This involves comparing the system's behavior to the expected results.

7. The seventh step is to optimize the system. This involves making adjustments to the system parameters to improve its performance.

8. The eighth step is to document the system. This involves creating a detailed description of the system and its components.

9. The ninth step is to maintain the system. This involves keeping the system up-to-date and ensuring it continues to function properly.

10. The tenth step is to evaluate the system. This involves assessing the system's performance and determining if it meets the requirements.

EXETER WINS INTERSCHOLASTIC MEET AT HARVARD BEATS WORCESTER BY 15 POINTS IN GREATEST OF ALL STADIUM SCHOOLBOY CONTESTS

SOME OF THE STIRRING FINISHES AND WINNERS IN THE INTERSCHOLASTIC MEET AT THE STADIUM AT CAMBRIDGE YESTERDAY.

Picture on left shows Means of Legate School winning 120-yard hurdle race. Means is on the right, while Parsons of Hope street High second. Centre photo shows Worthington of Exeter breaking broad jump record.

Over of Puching School is shown in upper photo as he won 220 yds. race. In the lower photo, right hand picture shows race of Legate School (on left) winning 100 yard dash.

'Cy' Young Declares "I'll Come Back Again"

Dean of All Baseball Players Tells the Boston Sunday American He Will Try to Recover His Arm and Round Out 25 Years on the Diamond.

CY YOUNG

The following statement was made exclusively to the Boston Sunday American by Cy Young, the "grand old man" of baseball—the dean of active players—who has retired from the Boston Nationals to his farm at Peoli. In the statement Cy makes the surprising announcement that, notwithstanding his retirement after twenty-two years of play, he hopes to "come back" soon and round out twenty-five years, his father's baseball career in Boston.

BY DEYTON TRUE YOUNG.

P. O. May 25. I am not through with baseball yet, and I hope to round out my career as a major leaguer and baseball player for all time in old Boston.

I know that in retirement that I was withdrawing from the Boston Nationals and coming back to my farm has been taken as meaning that I have said farewell to baseball.

But, while it is true that my arm is sore and weak, still I cannot make myself believe that it has outlived its usefulness. And I have hopes that I will round to before long and win enough games for Boston to land the team in the first down.

First Time He Ever Had a Lame Arm

A lame arm is something decidedly new to "the old man." In all my experience on the diamond I never was troubled with a sore arm until this Spring. I don't recall doing anything different than I have been doing each Spring for a most long past quarter of a century.

If I had my arm had "won its race" I would be the first to tell Manager Knibb. I do not want to take anybody's money under false pretenses. I feel confident that it is only a cold in my arm which I contracted this Spring, and it persists in hanging on so long that it has become annoying.

However, I intend to convince myself as to the truth about my arm and plan to consult "Doc" Howe at Yountpoint within a day or two. If he tells me my good right arm is no more I will wire Manager Knibb that he need not look for "Old Cy" to join his team again, for it would be useless for me to have my heart in the game without the necessary strength and running in my arm to follow the dictates of my heart.

I intend to remain at my Peoli farm and enjoy a sort of vacation for a couple of weeks. Probably I ought not to say "enjoy" as I want to be frank when I say I am greatly bothered about my arm.

Of course I realize that I can't go and pitch forever.

But it was my ambition in life to pitch for a quarter of a century. I felt certain that with such a record in the big leagues no other pitcher would ever equal it.

I don't misunderstand me and think that I just want to "hang on" and round out twenty-five years of service as a major league pitcher. Not me. I hoped to complete a quarter of a century and be as useful to my team in the twenty-fifth year as I was in my most balmy days.

It would indeed be a feat of which any pitcher could well feel proud to pitch for twenty-five years and then after it was all over turn to his final year and say, "Well, I won more games than I lost, and now I am satisfied to retire from the grand old game."

MIGHTY ALEXANDER CAPTURES PILGRIMS

Phillies Get Back at Kling for Opening Victory by Score of 5 to 2.

PHILADELPHIA, May 25. Johnny King's pilgrims were powerless before the deceptive smarts of the mighty Alexander today and as a result the Phillies won in easy style by a score of 5 to 2.

The Quakers gave their star pitcher, magnificent support, and time and again stopped the pilgrims from scoring by pinning off sensational plays in the field.

Alexander was master of the situation throughout the entire nine innings and allowed the visitors only four scattered hits.

The local job was opposed by Hub Par-

Jack Coombs Holds Sox to Three Hits

Joe Wood "Pitches His Head Off," But the Best He Gets Is All the Worst of It and 18,000 See the Athletics Win

By L. R. MURDOCH

Jack Coombs, the hospital hit for the last few weeks, was a great pitcher today. He was all but gone. He was hoping that the Sox would be a good baseball player at last. He took a lot of hits, but he was a good pitcher.

By Gus Mager

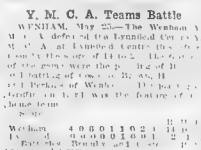

CHICAGO, May 25.—President Hon. Johnson of the American League, tonight lifted the suspension on Ty Cobb, the star fielder of the Detroit Club and inflicting a fine of \$50, permits the player to join his team at Chicago tomorrow.

Mr. Johnson issued a statement in which he promised full protection to managers and said that the league had arranged to increase the penalty for any player found guilty of such a crime.

Several prominent baseball players, who will be sent to the penitentiary for a term of years, are expected to be released after receiving the pardon of the president.

Willie Ritchie Declares He Beat Champion "Ad" Wolgast

SPEED DEMONS IN MATCH AUTO RACE

Photographs of Battle Prove That Wolgast Showed Signs of Distress and Did Not Look Like a Real Champion

PICTURE OF WOLGAST-RITCHIE FIGHT ON COAST. JUST RECEIVED HERE

Ritchie "Punched Hole"
Knox Box of His C
Demands A
for the Cham

WILLIE RITCHEE has come East to tell us about the fascinating he, handed Adolph W. Wastzer, the champion lightweight, in their recent four-round fight. Ritchie, who has brought along pictures and papers to prove that Ad took a trimming in the brief encounter. Ritchie declares he had Wozzast in a very hard battle for the championship. His picture pleases him and he has the humility to say he was not a very good fighter. Ad got a nasty cut on the lip, the blood from which was liberally applied to the face of the warrior, also that Wozzast plain showed signs of distress as we saw in the picture. But he did not look like a real champion in face of the boxing skill and punch of the champion. "I was not," he says. "Nobody expected Wozzast to be as good as ever, after the long rest from his appendicitis operation. I was sure he would be a prize and another match for punching holes in the king box of his class."

Ritchie came on from the coast to visit his former manager, Emil Thiry, at Chicago. Thiry then sent him on East, where his affairs are being handled by Billy Gibson of the firm of J. J. Hill & Co., New York. Ritchie hopes to meet Wolgast, Leach Cross or Knockout Brown in a Gotham bout shortly. Wolgast preferred. This puts Ritchie in a race with his old stablemate, Packer McFarland, for a whack at the champ in ten rounds, and it was interesting to see which wins out.

"I gave Wolgast as tough a whaling as any fighter ever took in four rounds," said Ritchie last

SPEED KINGS TO RACE FOR FORTUNE IN 500 MILE GRIND

NOTED PILOTS WHO WILL DRIVE WORLD'S FLEETEST CARS IN INDIANAPOLIS RACE.

Reading from left to right: Donald Herr, who will drive a National; Mel Marquette, winner and driver of the Marquette; Ralph Mulford, famous pilot, who is the favorite in the race, with the Mercedes; Teddy Telford; Bert Dingley, to drive a High power; Ralph Mulford, driver of the Marquette; and John Culligan, and Charlie Myers, one of the Stutz racing crew.

WORLD'S FLEETEST CARS WILL START IN 500 MILE RACE

INDIANAPOLIS, May 25.—Twenty-seven of the greatest drivers of automobiles in the world will start their long journey around the 2 1/2 mile track at Indianapolis today for the second annual 500 mile race.

Represented in the race by Ralph Mulford, who will drive a Mercedes, is the favorite to win. He is followed by Donald Herr, who will drive a National, and Mel Marquette, winner of the 1911 race, who will drive a Marquette. Other drivers include Bert Dingley, who will drive a High power, and John Culligan, and Charlie Myers, one of the Stutz racing crew.

The race will be run on a track which is 2 1/2 miles long, and the winner will receive a purse of \$10,000. The race will start at 11 o'clock and will run for 24 hours.

The race will be run on a track which is 2 1/2 miles long, and the winner will receive a purse of \$10,000. The race will start at 11 o'clock and will run for 24 hours.

CAR IN POLITICS.

Many Office Seekers Use Jackson Autos.

Political candidates, especially those who wish to be governors of their State, seem to have a preference for the Jackson automobile, which is known for its speed and reliability.

EMF Studebaker

Studebaker Builds Better Than You Would for Yourself

Your Studebaker car is built with more attention to perfect results than you could possibly require if you overtook the whole process. Little details, you would think unimportant, receive the most thorough care, because Studebaker never built a slipshod product, and never will.

Deposits of hardness of steel and the fitness of each hidden part which only long service proves—the very way of every piece of metal in your car—these things we know, and in our own factories we carefully make them right.

You would be careful if you could build your own car. We are far more careful because we care as much and know more about it.

You would be careful if you could build your own car. We are far more careful because we care as much and know more about it.

WAIT FOR THE USED MOTOR CAR SHOW

June 5th to 11th inclusive.

Open Tuesday Evening, June 5th, 7:30 to 10:30 p.m.

Admission 25 Cents.

Admission 25 Cents.

The ostrich can't fly—has too much weight for its wing power. The vanadium built Ford has all the weight it needs for strength—but it's the lightest car for its size in the world. We'll sell seventy-five thousand new Fords this year—principally because it's not an ostrich car.

All Fords are Model T—admirable recent bodies. The two-passenger runabout costs \$200—the five-passenger touring car \$240—the delivery car \$280. The lowest car \$200—0-0, b. Detroit, completely equipped. Get later catalogues from Ford Motor Company, 480 Madison Street, Boston, or direct from Detroit factory.

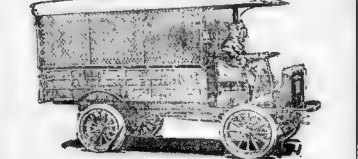

All Fords are Model T—admirable recent bodies. The two-passenger runabout costs \$200—the five-passenger touring car \$240—the delivery car \$280. The lowest car \$200—0-0, b. Detroit, completely equipped. Get later catalogues from Ford Motor Company, 480 Madison Street, Boston, or direct from Detroit factory.

Autocar

"Used in Every Line of Business"

Adams Express Company bought ten Autocar Commercial Vehicles in November, 1909. The following January, they bought another.

For a period of over two years these eleven Autocars have been subjected to the most rigid kind of test under all road and weather conditions.

In March, 1912, Adams Express Company ordered of us fifteen more cars. In May they placed another repeat order for twenty-four cars. This makes a total of FIFTY Autocars for their delivery and collection service.

More than 600 of the country's leading business concerns have adopted our cars, owning from ONE TO EIGHTY each.

Write for Catalog and List of Autocar users.

The Autocar Company, Factory, Ardmore, Pa.

The Folly Race & Three French Beauties

How Wistful

Mlle. Greuze, roguish
Mlle. Renouardt and
demure Mlle. Martyl
always at their wits' end to
invent new extravagant surprises
for the fickle Paris Public

Mlle. Martyl
who writes
frivolous notes
on the desk of
Catherine
de Medici

Mlle. Greuze
who sports the
jewels of many Queens
from Cleopatra to
Marie Antoinette

Mlle. Renouardt
who wears stockings
at \$500 a pair and
only wears them once

Paris, May 18
THE most beautiful woman of
Paris was crowned in a
mad race to win the title of
supreme extravagance.
Woman used to be judged by her
ability to break men's hearts. Now
she is judged by her ability to
break men's pocketbooks.
At the present moment the most
conspicuous contestants in the ex-
travagance prize are Mlle. Greuze,
Mlle. Renouardt and Mlle. Martyl.
But there are others. As in a
horse race, the winners are liable
to come at a terrible moment at any
moment. The beauty who drops
out of the race may be discovered
twenty-four hours afterward with-
out enough to pay for her supper.
Extreme extravagance and extreme
poverty are equally akin.

A few months ago the leaders in the race were Monna Delia,
Regina Hadet and Gaby Deslys, but they have been eclipsed. Monna
Delia was the lady who would not put her feet on the common
earth, while Regina Hadet would not sleep in a bed that had not
been occupied by a queen.

Greuze, Renouardt and Martyl have set themselves to surpass
all these extravagances, and they have succeeded wonderfully. A
regiment of millionaires, a score of aristocrats that once were
Cromwells, tell the story of their triumph. They have added equal
refinements to the comparative crudities of their rivals.

Greuze's greatest extravagance is jewelry. She wears the neck-
lace of Marie Antoinette, the bracelets of Catherine the Great and
the earrings of Cleopatra. Though she is supremely extravagant,
she has perfect taste.

Renouardt's extravagance lies chiefly in dresses. She never
wears one twice, and she only wears the costliest creations of the
Rue de la Paix, costing \$1,000 apiece. Though they are costly, they
are also very beautiful. Her specially woven Korean silk stockings
cost \$500 a pair.

Martyl, the brilliant singer of the Opera Comique, is even more
refined in her extravagances than the other two. She would not
hang the wealth of Colombia about her neck. Her extravagances
are confined to her toilet.

A hundred art treasures of almost inestimable price adorn her
mansion. She possesses the secret bowl of Livia, the vase of
the writing desk, with a hundred secret drawers, of Catherine de Medici.

Where will their extravagance end? A Parisian wit has com-
pared them to daring aeroplanists winging their way toward an un-
attainable aerial goal on air craft of gold a lured by inconceivably
costly jewels. Some time, sooner rather than later, the daring of
the aeroplanists, raised so high above the common herd, must falter,
and one after another they will fall to the earth, poor, crushed
human things.

By L. K. Hirshberg, A. B., M. D.

Hibernation, or the winter sleep, of bears, sloths, snakes and various other animals, differs from sleep by virtue of the fact that the animal has stored up a large amount of food in its muscles and other tissues during the period preceding the hibernation. Sleep, on

This condition is a local one, and occurs in places where the sweat glands are the most numerous, and unless corrected the victim's life is scarcely worth living, because they are

God gave a baby his mother's arms and sweet breath to soothe it when tired or fretful. Any other method is criminal and the punishment will come to those, who, through ignorance, or otherwise, poison us little system.

Dr. Cutlack placed a dog upon its back and held its legs in one position for a minute. When released, it remained absolutely quiet and motionless for eleven minutes. Another one was held on its back in a most uncomfortable position for four seconds. At the end of that time it became quite rigid and remained so for ten minutes. When turned around on its feet, it ran away in a normal manner. Many crayfish produce the same results. He also took a bullfrog and held it for several seconds with out

From this, he concludes that sleep is not due to any exhaustion of the cells of the human body, and that sleep can only take place when all disturbances have been reduced below the threshold of sensation. The

up in our muscles. Sleep does take place. It is neither from fatigue, exhaustion, quiet nor anemia, but for the most part, because all of our muscles become relaxed and untuned. Being awake, really depends upon the tuning up of our muscles. When these become diminished, the sand man comes around. When all tone disappears, we have succeeded in wooing Morpheus. Dreams appear and all sorts of fantastic images begin to dance through our brains. Although all of our muscles have been soothed and untuned, there are no living cells in the brain, so the brain continues to be active. The subject of the dream is the same as the waking subject is the same as in our waking hours. Thus has Dr. Corveth brought experimental evidence to support his belief, that hypnosis differs from sleep, and sleep, in turn, differs from the motionless state of the lower animals.

It is certain the hyssop given Jesus was not the same hyssop we know in this country, for that plant does not grow in Palestine. It was probably an extract of the mandrake, very common in Palestine, and known to have powerful anesthetic power. Vinegar and herbs were early applied to external wounds to act as healing agents, and the use of mandragora (mandrake) taken internally to modify pain was known to Piliy, who wrote just before the Christian Era. Piliy states very clearly that mandrake has a power of making those who drink it sleepy, and that an extract of mandrake was used to relieve the pain of hemorrhoids, puncturing, leech bites, etc. He also states that the stone "Memphitis" when powdered and applied with vinegar stops the pain to be cut or cauterized, for it so paralyzes the part that it feels no pain." Since these practices were common in the time of

Now-a-days we use the inhalation method for producing anaesthesia because the nerve-centres are more quickly reached through the air-passages, and once they are paralyzed the nerves can not feel. But in the olden times they knew no better method than that of taking the anaesthetic internally and waiting for it to paralyze the centres as it worked its way into and through the blood. Even to-day morphine-pills are administered where a patient is in great pain, to bring about the paralysis of the nerve centres and thus produce anaesthesia.

Why OYSTERS Are Good

is no better "it" in those months.

This has been proven to be an absurd belief. It doubtless is gilded away by a lack when cold storage, plants, ice boxes, refrigerators and rapid transit were little known. Then, but months, it was naturally difficult to prevent oysters from becoming tainted after they were kept for a little while.

But in these days there is no danger of eating oyster every month of the year. And, in fact, there are many

"There is as much nutriment in a quart of oysters as in a quart of milk."

od **EVERY MONTH** in

the Year

Oysters are by far the most important of the shellfish. Professor Langworthy of the Federal Agricultural Department says regarding oysters: "Speaking roughly, a quart of oysters contains on an average about the same quantity of actual nutritive matter as a quart of milk, or three-quarters of pound of beef, or two pounds of fresh codfish, or a pound of bread; but, while the weight of actual nutriment in the different quantities of food materials named is very nearly the same, the nutritive value is widely different. That of the lean meat or codfish is nearly double that of the oyster, and the nutritive value of the bread is nearly twice that of the meat. The nutritive substance whose principal function it is to produce red blood, muscle, tendon, bone, brain, and other similar organic tissues. That of bread contains considerably

protein, but a much larger proportion of starch, with a little fat and other compounds which supply the body with heat and muscular power. The nutritive substance of oysters contains considerable protein and carbohydrates (largely starch). Oysters come nearer to milk than almost any other common food material as regards both the amounts and the relative proportions of nutrients."

It can therefore be readily understood that oysters are quite a suitable article of diet for the corpulent. The only precaution needed to be observed in buying and using them is to see that the shells are tightly closed. Oysters which are open are a very slight degree slightly dead oysters inside, with probably no decomposition, and possibly ptomaine poisoning if they are eaten.

MILLIONAIRE PAPAS LATEST CRUEL BLOW AT THE CHORUS GIRL.

How the SNOOPER Has Taken the Place of Disinheritment and Sanitariums to Keep Son From Even Getting a Chance to Pop the Question.

NOT long ago the ranks of the chorus were the world's best marriage market. Patches and pippas were daintily displayed there just as they are in the stalls of any first-class shop. Millionaires' sons and peers' sons came to gaze and select. Many of America's most noted ladies were picked from the chorus mart. So were dozens of England's now noblest dames.

There came quite recently a change over the spirit of things. Instead of forgiveness there was disinheriting for son-who-married-the-chorus girl. Instead of the house-warming and all-around allowances for maintenance there came forcible tearing away of son from the bride and incarceration in sanitariums.

Instead of the tatted and being sloughed, a body of an instant on upon son's ability to enter into a legal marriage contract. Alternat is a splendid word, because invariably they alienated love's young dream from its object. And in stead of a rose-tinted future for the chorus-girl bride there was a disillusion or divorce!

In fact, the chorus girl's increasing and lucrative industry of marrying millionaires' sons suffered a decline. Therefore Broadway was thinned last week by the news that Adolphus Bush, III., of the enormously rich brewing house, had fallen in love and was going to marry Ethel Amorita Kelly, the pretty dancer, who has been entertaining American millionaires' sons by dancing at their dinners and in programs since she was eight, and who is now playing Flirt, the dancer, in "The

Winsome Widow," at Reginald's Moulin Rouge.

How had Miss Amorita Kelly beaten the millionnaire combination? we asked her.

"How on earth can a man propose to you when you're never allowed to be alone with him?" she said.

We were astounded! Was a new perbly, a new conspiracy of the millionnaire against the chorus girl to be revealed? The question was put to Miss Kelly.

"Indeed, yes," she said. "I know about it. I have given the philosophy of the matter much thought! If I tell you it I will have to be awfully frank. Perhaps I am a frank to print!"

"So far as you like," we said, "so important a sociological matter there must be too much frankness."

"Well, then"—said Miss Kelly.

"How Every Millionaire Papa's Doing It, Doing Us, Doing It Now."

Harry hadn't a chance. That was a bad blow for a poor girl—the sanitarium. It drove off many a Billy Goshes of Money, and drove a lot of us to marrying plain business men.

Then, all at once, Millionaire Daddy found out that it was a kick in the pants he was using. Roy Pierce declared by the experts too loose in the saddle to have res to married Betty Chapman, runs away and marries papa's stepdaughter, which was what papa had wanted all along. No alienists called in there—well believe me, no. But when did Roy get the snort furnished enough to play a safe and sane marriage game? asked everybody.

And now we come to the latest racket, most brutal and atrocious move of sonny's millionaire papa against us stage girls. The wicked old rascals got their heads together again, and the result is—THE SNOOPER!

What is THE SNOOPER? THE SNOOPER is the animated tag that sonny carries around with him every where, and which deprives him of the right of the right set out in the Declaration of Independence—liberty and the pursuit of happiness.

The latter is U.S.

It hurts me to have you ask if I am engaged to Adolphus Bush, 3d, of St. Louis. Why, Adolphus never had a chance to propose to me unless he had wanted to make a stomp speech on Broadway when he did it. We never had a minute alone. The SNOOPER system worked too well for that.

"Adolph, Adolph, everywhere, but not a chance to pop!"

"Two company, three's a crowd," said wise old millionaire daddy.

"An ounce of prevention is worth a pound of cure." And so sonny doesn't move a step nowadays without a social detective close by his side. The social detective may be his valet, or his groom, or his friend, or a perfectly congenial chap who's been introduced to him quite by accident—"accidents" it is called, but not a chance to pop!"

Often times it's all four and more besides. Daddy has arranged all that. The game is that the social detective must never let sonny be by himself for a minute with any of us charming but dangerous young people. Daddy thinks of us as pretty cats ready to catch sonny in our claws.

Then, when sonny is ready to carry us to a minister's house, he gets a yank at sonny's

and the nice chap goes about with a dog, a wolf with a white collar, or walks the Great White Way with a dog. And when he comes to a chap, he's introduced to a woman who trails around with him. What are these men? Social detective's men, as you're born. They're so that sonny is never alone.

If he takes a fancy to a woman, it's never in a quiet, cozy spooner runabout, with a seat just wide enough for two. Oh, no! Miss or Millionaire has a touring car with two or three seats, and such one wide enough to stuff a whole family of six into it. He doesn't take the girl's heart out for a spin. He takes a party on an excursion.

If sonny wants to go to the theatre he never sneaks away by himself. Not he. He has to make up a party and if there's a girl that makes his heart jump by a glance has to have her to the party—and that's all.

The correspondence is conveyed if the value doesn't attend to it a secretary does, and this secretary has the authority, given by daddy, to force to mail letters, or to read them in papa's absence, when he reads them and chuckles over them or swears about them, after business hours, according to his temper.

There's been a lockout of chorus girls. Wealthy papas have struck. What will be the result?

What will be the result? I don't know. The armor plate is still in the air, but it's a little bit better.

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

"What will be the result?"

By Ethel Amorita Kelly
(One of the Sufferers)

This is Miss Kelly.

OF course getting married's a business these days. If Love comes in with Billy Boy and Betty Girl and ways there, all right. That's quite nice. But Billy Boy and Betty Girl, if they just don't keep getting each other's goat all the time, can do mighty well without Love-Star-Boarder. In fact, it's conceivable that B. Boy and B. Girl, other things being equal, are a lot better off without him. Two's company, and three's a crowd, and Love-Star-Boarder is often a whole big crowd. If Billy marries Betty without really loving her, you can bet he has better reasons than if he did love her.

She has a little way with her, maybe, ability to entertain, charm, beauty, wit. She's a wise little person who can run house smoothly and to Billy's financial and social advantage. Believe me, no man ever exchanges the wedding ring unless it's for value received. If Betty marries without love, other things being equal, she does it for luxuries, peace, comfort, ambition—and if she's wise she plays the game square and doesn't attack the cards against her partner. I can see how with Love-Star-Boarder left out there isn't likely to be any big quarrels, friction, zordid, green-eyed jealousies, scandals and divorces. Why should there be if both play the game right and haven't that awfully disturbing element of too much ear-ear—its usually piffle and vanity anyway—to set 'em at each other. That's all right. So far I heartily agree with Millionaire Papa's business-like outlook on Sonny's matrimonial venture.

It's a business proposition. Here is Papa, with all his business training and his money on one side, and here is little Chorus Girl Betty, with her face and figure and femininity on the other side. Love is, after all, mainly a desire for possession. It's up to Little Betty to stimulate it; it's up to Papa to stamp it out. That's the whole proposition in a nutshell.

Now that holds true of any woman trailing down a millionaire's son. Why does the horse line of battle centre on Little Chorus girl Betty, and why is she having a harder and harder time all the time to get away with it? Well, listen to the first play, the Chorus Girl plays away from the herd. That's a new independence. After she gets in the heat of the foot lights she asks herself, "What am I going to do for myself?" There are only two answers. If she's an idiot. If she's a genius and got a real rabbit's foot, maybe she goes to be a star, with a few plum-pums. Or maybe she can become the bride of Billy, the Millionaire's Darling.

That's about all. Yet, stay, stop, look and listen. Only one out of a thousand gets to be a star. And there aren't enough millionaires' sons to go round among the other nine hundred and ninety-nine. What exceptional ability must Betty have to hope and throw Gold-Bede's Billy! And not only must she be able to rope Billy, but she has to fight against the increasing villainy of Papa.

This worked for a time. Look at poor Miss Murray, the original Brinkley girl. In the first faint flush of dawn and hope she ran away with William Schwenger, the son of the millionaire brewer's supply man. And what did she do? Starved! Had to cook poor little meals on a gas stove and went back to the stage again. Look at dear Dossie Gibson. What did dear Dossie do? She was an original Floradora, and she ran away with Draper Dodge, son of Millionaire Harry M. Dougherty, of Cincinnati, O. And here is Dossie now who was the prettiest bathing girl on the stage, slaving out her life on a Texas ranch, miles away from water! And Dossie Van Ness, perfectly splendid Dossie. She ran away with George Malligan, son of the millionaire New York contractor. And I hate to tell what Dossie had to go up against!

It was cruel—but we met it like heroes. We really made good as poor men's wives. And Sonny actually proved a capacity for work. This was very hard on the family. Besides, Millionaire Momma was all out up with Baby Billy away from her. Little babies made a lot of difference, too. Millionaire Daddy had to try a new line.

He did. Oh, girls, the peridy of those pictures! "Very well," he said, "after all, love is insanity. When my boy goes hanging around a stage door I'll just put him in the dippy house—the sanitarium, you know—until he gets over it. If he marries the girl before I can get him I'll kidnap him and put him away, and prove by experts he hadn't brains enough to marry, pay off the girl, if I have to, and get Sonny a divorce or an annulment."

And that's what he did. It's what they call in Wall Street a coup d'etat. "Koo," Koo to cure a coo, you know. Forgive the bitter jest.

There was poor Betty Chapman, of the copper-colored hair. Daddy H. Clay Pierce, of the Standard Oil Company, fixed it for son Roy when he came home and married Betty. Away went Roy, torn away from his fond wife's arms, and sank miserably into the arms of a girl named Edna. And while Roy was there, getting over his innocent little habit of smoking thirty cigarettes a day, Edna went and had her marriage annulled.

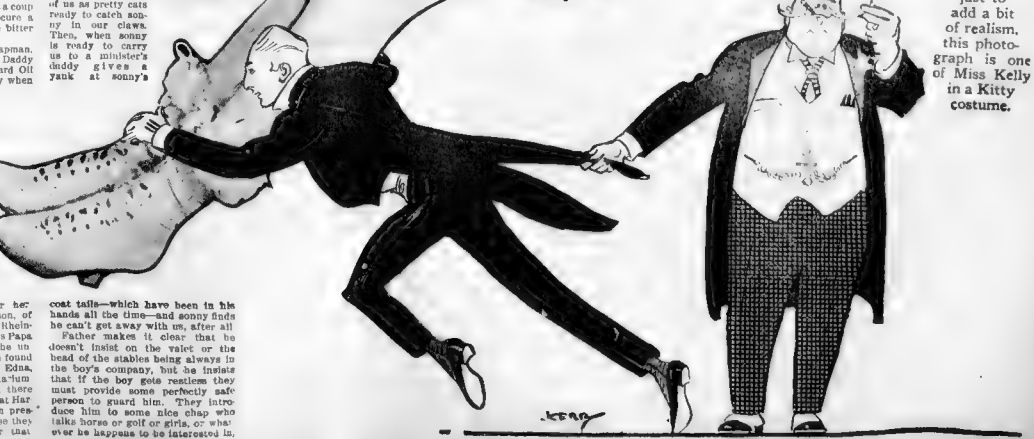

Then there was Edna Loftus. Stunning girl, Edna! Harry Rheinstrom was just Matineewas away over her. Harry was a millionaire's son, of Cincinnati, O. But Mamma Rheinstrom played the same game as Papa Pierce and all the rest of the un-natural parents, and when she found Harry had married dear old Edna, she shot him off to a sanitarium. Harry Oba had married dear old Edna after Mamma had testified that Harry had squandered \$10,000 on pleasures for Edna. Of course they brought him in crazy after that.

coat tails—which have been in his hands all the time—and sonny finds he can't get away with us, after all. Father makes it clear that he doesn't insist on the valet or the head of the stable being always in the boy's company, but he insists that if the boy goes real-time they must provide some perfectly safe person to guard him. They induce him to some nice chap who looks like a horse or golf or girl, or whatever he happens to be interested in.

"Daddy thinks of us as pretty cats ready to catch sonny in our claws. Then, when sonny is ready to carry us to a minister's, daddy gives a yank at sonny's coat tails—which have been in his hands all the time—and sonny finds he can't get away with us, after all."

And just to add a bit of realism, this photograph is one of Miss Kelly in a Kitty costume.

ARE A DANCER'S BRAINS ALL IN HER TOES'?

HEARTLESS persons, with swords for tongues, have said that dancers have no brains. They have declared that Nature, working through her law of compensation, has given to dancers brains in their toes instead of their heads.

The careless world has accepted this statement and gone about its own affairs untouled. Comes now Miss Flora Hengler, a dancing favorite, one of the two agile and beautiful Hengler sisters, of Brooklyn, and overturns that theory with one sweep of her nimble great toe. Or has she?

At any rate, she has written a book, "Little Miss Daphne and Other Tales."

This newspaper publishes to-day one of the best stories, "The Tale of Little Lan-Tin."

Read the story yourself and judge whether Miss Flora Hengler, who dances so charmingly, has brains or only—well, read it.

The Tale of Little Lan-Tin

By Flora Hengler

(From her book, "Little Miss Daphne and Other Tales"—Copyrighted by the Author—Printed by Permission of the Publishers, the Bookery, 13 East 30th Street.)

It was a beautiful Chinese garden. Flowers, a wealth of blossoms everywhere.

They mingled their branches in the sweet, friendly way that trees have, and what a tracery against the lovely blue of the chevelier sky! Under the taint of the plum tree, in the lace draperies that cast their shadows, stood a little maid. Her name was Lan-Tin. She was a tiny person in her Chinese garb, sprightly in her graceful movement, and bird-like in the quick turn of her small, dark head. It was difficult to see the eyes of Lan-Tin. But those who looked into them paused and looked again. If she had not already veiled them with a quick drooping of lashes, or one of those birdlike movements of her little head.

Lan-Tin was very shy. She spoke Chinese, but it was not often that she spoke. Her tiny hands were white and one brown, and on one of her small fingers a little gold ring was firmly imbedded in the flesh. Her eyebrows did not slant. Her eyes were the deep dark blue of the sea, toward which she was always looking. When the golden cloud mountains of each sunset appeared she would gaze out over the rippling water that sparkled like a big sapphire in the glorious gold and crimson light.

Every day down came Lan-Tin, with her arms full of flowers, to weave a fresh coverlet of blossoms, and at dusk she came again, kneeling till the pale moon rose high in the heavens and flung a mantle of silver over the white petals of the plum tree, till the night birds sang in the branches, till the shrill cackle of a Chinese voice called in harsh accents.

PART II.

In the yellow lantern light Lan-Tin danced. Hung Chang looked on with folded arms as his tiny face a sharp look of concentration as he watched the noble Chinese Mandarin from Peking, whose patronage meant his very existence.

Lan-Tin was the last, and Hung

Miss Flora Hengler, the Dancer Who Wrote This Story.

"No! No!" She Cried. "I will not go!"

Chang had raged furiously when he could not find her. But now all was well, as he noticed the pleased mutterings of Yoo-Tow to his cringing chamber-lain, and the narrowing of his slanting eyes as they followed the butterfly movements of Lan-Tin here and there, the free toes of her little head and the graceful abandon of her arms, as she flung them over her head and again brought them down with a sweeping bend to the very ground.

With the imperious gesture of a little queen she commanded the Chinese tom-tom music to cease. And she began to sing. The words were Chinese, a "Poem of the Wind." But the tune was her very own, and, oh! it wasn't a bit Chinese, but a good old-fashioned American tune which her father had whistled.

Lan-Tin forgot the Mandarin and all his regal magnificence. She was playing a pretty game of Make Believe as she sang. She was the wind blowing through the plum tree, tossing and twirling, bending low

"The noble Chinese Mandarin from Peking."

Here's a Famous and Charming Danseuse Who Has Written a Book That Maybe Proves They Aren't--Read Her Tale of Persecuted Little Lan-Tin and Decide.

"A yellow robed Mandarin dancing up and down with rage."

as did the drooping branches, waving slowly, rustling feverishly to a low whirlwind. With flushed cheeks and glowing eyes she sang in a voice that was like a bird's.

Yoo-Tow was excited. He was a Chinaman, but he was not a Chinese. He was a Chinaman, but he was not a Chinese. He was a Chinaman, but he was not a Chinese.

Yoo-Tow was excited. He was a Chinaman, but he was not a Chinese. He was a Chinaman, but he was not a Chinese. He was a Chinaman, but he was not a Chinese.

THROUGH THE AIR AT 500 MILES AN HOUR IN A RAILROAD TRAIN

On the right is shown one of the aluminum cars of the magnetic railroad of the future at rest at a station. As the current is turned into the series of magnetic coils upon which it rests the magnetic field thus created repels the car and raises it several inches above the track, where it remains suspended in the air. To propel it the power is turned into the giant solenoids, or arch-like magnets, shown in the illustration, which attract the car at great speed towards their centre. As the car passes through each solenoid, the current with which the solenoid is charged is automatically cut off, so as not to detain the car beneath the arch, and the momentum of the car carries it on until it comes within the magnetic zone of the next solenoid. The arrows B designate the levitating lines of force, while the arrows A represent the magnetic force which propels the cars. To simplify the illustration, all exterior mechanism with which the cars would be equipped has been eliminated. A speed of 500 miles an hour might be attained on this railroad without the slightest difficulty.

How a New Electro-Magnetic Mail-Carrying Device Which Defies Gravity May Be Developed into the Fastest Passenger System Ever Conceived

FROM the Atlantic to the Pacific in six hours in a steel railroad train without wheels, which floats through the air or stands stationary in the air in utter defiance of the law of gravity, may be the logical development of a remarkable invention just patented at Washington.

The simple phenomenon of magnetic repulsion, which is a part of every elementary work on magnetism, but which has never before been put to any practical use, is the secret of the new device, of which Emile Bachelet, of Mt. Vernon, N. Y., a well-known electrical engineer, is the inventor.

That the plan is entirely feasible has already been demonstrated, an elaborate model designed to carry mail matter at a rate of 500 miles an hour having been constructed and operated successfully at the Bachelet workshop at Mt. Vernon.

Experimenting with an electro-magnet charged with an alternating current, Mr. Bachelet discovered that while most metals were attracted by the magnet, aluminum was repelled by the magnetic field when it was created. A piece of this metal six inches square and half an inch thick, weighing several pounds, was placed over a magnet into which an alternating current was sent and the metal plate immediately rose several inches in the air and remained there. The more current that was turned higher the metal plate arose. It resisted attempts to press it downward with the hands, but as soon as the current was cut off it fell in response to gravity.

Mr. Bachelet concluded the substance lighter than the air could be levitated in this way, a system of transportation in which gravity and the attendant friction might be discarded would be quite feasible.

By way of further experiments on, the inventor constructed a car-shaped car about four feet long and weighing 18 pounds. It was made of steel through which ran a strip of aluminum which ran down each side the length of the car. When this car was placed over a series of electro-magnetic coils placed a few inches apart and the current was turned on the car immediately rose in the air about two inches, where it remained absolutely stationary until the current was turned off.

"All that remained then," declared Mr. Bachelet, "was to select a propelling power, for it was obvious that if the line of coils were extended the car, however propelled, would travel along over them without ever descending."

He connected the line of coils about thirty feet and provided a guide-way, a grooved rail, into which a wheel attached to the car would slide and prevent the car from leaving the line of magnetic coils, which, of course, were necessary to keep it in the air and I caused the car to move along this guide-way by a series of solenoids.

"A solenoid, it may be explained, is a magnetized cylinder which attracts metals susceptible to it toward its centre. Placing these solenoids, like arches, at intervals of ten or twelve feet along my track, their effect was to draw the little car toward and through them, the impetus which it gained in this way being sufficient to carry it along far enough until it came within the magnetic zone of the next solenoid, and so on in this way. To overcome the tendency of a particular solenoid to bring the car back to its centre after it had once passed through, instead of allowing its momentum to carry it forward, I arranged my mechanism in such a way that as the car passed through each solenoid it automatically cut off the power supplied to that particular solenoid."

Mr. Bachelet's model was recently exhibited to a group of scientific men and was found to operate perfectly. Only 25 volts of electricity were used to supply the power to the

A remarkable experiment to test the levitating power of the magnetic coils used in connection with a fast mail-carrying device, which may be developed into a passenger-carrying system. The carrier in the picture weighed 18 pounds, the child 65 pounds, or a total of 83 pounds, and yet with a voltage of only 110, they were raised fully eighteen inches in the air, where they remained until the power was turned off.

magnetic coils and to the solenoids, but the little car shot about half an inch above the track at a terrific rate of speed, and indicated that with more current the speed obtainable was almost limitless.

Of course then, it is no reason why magnetism, generated through the solenoids, need be relied upon to furnish the propelling power, although Mr. Bachelet prefers that system for the purpose of transmitting mail or express packages, or for moving cash and parcels in large department stores. But, as he points out in his patent specifications, the car might just as well be propelled by creating a vacuum in front of it in a properly constructed apparatus, the principle of suction being relied upon to propel the car, or compressed air might be applied for the same purpose.

Then, again, a propeller such as is used in aeroplanes would be equally practicable.

Mr. Bachelet's apparatus as at present constructed is designed only for the carrying of mail, but the same principle, he declares, might be readily extended to the transportation of freight and passengers.

Even the small model constructed by Mr. Bachelet exhibited remarkable carrying power. A child weighing sixty-five pounds was placed upon it, but her weight seemed to have no effect whatever upon the levitation of the car. A current of only 110 volts was all that was required to raise the car clear above the track, and had there been means of propulsion at hand there can be no doubt at all that the child might have had the distinction of taking the first ride on what may

The bowl of goldfish stands on an electro-magnetic coil. A square plate of aluminum was placed in the bowl and, of course, sank to the bottom. As soon as the current was turned on, however, the plate arose and remained suspended in the air several inches above the surface of the water until the current was shut off. It was upon this experiment that Bachelet based his electro-magnetic railroad.

The working-model of Mr. Emile Bachelet's electro-magnetic mail-carrying device, which develops a speed of 300 miles an hour, because friction is eliminated.

be eventually the fastest system of transportation ever invented.

Great speed is unattainable with a wheeled conveyance, because no wheel has yet been constructed, which can stand the strain of more than a certain number of revolutions per minute. Three hundred miles is about the limit attainable with the regard to safety. The same is true of the aeroplane with its revolving propeller, and in the case of aerial navigation a further obstacle to great speed is encountered in the weight of the engine necessary to provide the power required.

Neither of these obstacles stand in the way of the magnetic railroad designed by Mr. Bachelet. Requiring neither wheels nor propeller, being sent along by either compression, air, suction or magnetic attraction, the car

is free of distraction, to which railroad wheels and aeroplane propellers are always subject, is entirely eliminated. Floating through the air, the only friction encountered is the skin friction of the air, which, while considerable when great speed is desired, may be readily overcome.

There is no reason at all," declared Mr. Bachelet, "why we may not travel 500 miles an hour with perfect safety by utilizing the valuable principle of magnetic repulsion. The current necessary to charge the magnetic coils along the line of way and the solenoids which provide the propelling power would be much greater, of course, than is now used for electrical rail transportation, but the increased speed would more than make up for the additional expense."

Take, for instance, a system from New York to Boston. At 500 miles an hour the trip might be made in thirty minutes, whereas it now takes five hours—ten times as long. If the cost of operation were five times as great as that of steam locomotion, as at present employed, the great saving of time would more than compensate for it.

"Consider the advantages of a trip to Chicago in two hours, instead of the eighteen now required, or of a cross-continent journey of six hours instead of four days, and the advantages of the system will be at once apparent."

It must be remembered, too, that the long series of coils and solenoids are not constantly charged with electricity, the car being so built that as it passes over a given set of magnets it automatically cuts them out of the circuit, and the same is true of the solenoids. This greatly economizes the amount of current necessary to operate the apparatus.

"To arrest the car at receiving stations is a simple matter, despite the great rate of speed at which it travels. It might be accomplished by cutting out the solenoids for a sufficient distance in advance of the terminal station, or if it were desired to stop the car more quickly at given points the solenoids might be so energized as to detain the car instead of impelling it."

"The particular details of construction are not of particular moment at the present time. The fact has been established that by levitating a carrier all mechanical friction may be eliminated to such an extent at least that it becomes a negligible factor in determining the possible speed. Consulting between Chicago and New York is within sight."

Instead of the long series of magnetic coils which has been described, the same effect might be produced by building tracks of aluminum and attaching the coils to the levitating magnets to the car itself. In this way the cars would levitate on the magnetic field which the coils created operating to raise the car from the aluminum track.

In this way, Mr. Bachelet believes, the construction would be greatly simplified and cheapened.

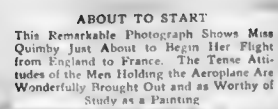

"While the magnetic coils are comparatively cheap," he declares, "by using an aluminum track and fitting the cars with the coils, the cost of construction would be much diminished. We would require only as many levitating magnets as would be required to levitate the car, the magnets moving with the car and being continually energized by periodic currents."

It would seem that if the levitating magnetic coils were tilted, all at the same angle, in the direction in which it is desired to propel the car, their repulsive action would not only levitate the car, but propel it at the same time, without the use of the solenoids. To test this, Mr. Bachelet built a working model consisting of a series of coils, which by the pressure of a lever might be tilted at any angle. Strange enough, however, it was found when the current was turned on, that the car was simply levitated although the coils were tilted at an angle of 45 degrees, the magnetic field created operating perpendicularly only.

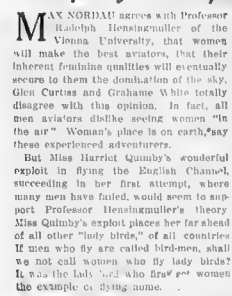

It may be many years before the invention is in such a shape as to make it available for the transportation of passengers, but it will be given a thorough tryout in the immediate future as a mail-carrying device.

Mr. Bachelet was for years official engineer for the State of Washington. He is the inventor of the well-known Bachelet apparatus for utilizing magnetic lines of force in the treatment of disease.

That he has conceived an entirely new idea in his electro-magnetic carrying system is indicated by the fact that the Patent Office granted him what is known as a basic patent on his invention. Such patents are granted in only rare instances. The telegraph and the telephone are covered by such patents, but only a few radical inventions are similarly protected.

THE SUN SPOTS CONTROL OUR WEATHER

A Sun Spot Is Like an Enormous Electric Dynamo. Its Tremendous Whirl Generates an Enormous Magnetic Field, Just as the Whirling Armature of a Dynamo the Same Size Would Generate.

This Magnetic Force Given Off by the Sun Spot Is Conveyed by the Ether to the Atmosphere of the Earth, Thereby Disturbing Its Equilibrium and Causing Violent Storms and Periods of Unusual Cold and Heat.

Science's Newest Discovery That Solar Cyclones Cause Our Floods, Tempests, Late Springs and Other Unseasonable Weather and That Their Effects Can Be Predicted Weeks in Advance Is Explained by Professor Garrett P.

By Professor Garrett P. Serviss.

Serviss,
the Distinguished
Astronomer

THE amazing vagaries of the weather during the past few months—devastating floods in the old world and then in the new; a warm winter in Alaska, a cold one in the United States; a late spring in the United States, a sudden and violent change of weather, snowstorms in March; a late and warm wave abruptly following each other in April and May; a series of storms in early May; a series of terrific tornadoes sweeping across the United States to destruction in the West and Southwest—all these have drawn interest in the sun and the influence of sunspots on the weather.

Interest that is emphasized by the fact that outbreaks of such spots have lately occurred, to which some observers attribute all this unwanted atmospheric disturbance.

Some go so far as to aver that they can predict great storms and other changes by means of the spots on the sun. Among these is Father Picard, of the Santa Clara College Observatory, California, who ascribes sunspots to the influence of the larger planets. Inasmuch as the positions of these planets can be foretold, and inasmuch as their at-

tractions are set up, which, in turn, produce in every sunspot a gigantic magnetic field. A magnetic field means a space within which lines of magnetic force are in action. Thus a sunspot might be regarded as resembling a tremendous dynamo, creating electric currents of unimaginable power.

Everybody knows that a dynamo consists of two essential parts—first a powerful electro-magnet, which creates around its poles a magnetic field, and second an armature, consisting of wires wound round an iron wheel, or a cylindrical core, which is caused to rotate rapidly in the magnetic field. The change in the number of lines of magnetic force flowing through the coils of the rotating wire sets up a current of electricity in the coils, and this current can be led away by other wires into an external circuit by which lamps may be illuminated or mechanical work done. In short, the dynamo is a machine for converting mechanical energy into electrical energy by means of electro-magnetic induction, and the electrical energy thus produced can be turned back into mechanical energy to be utilized in a different way and a different place from that in which it was first used. While it is in the form of electrical energy it can be carried long distances by wires and recharged into mechanical energy

at the place where it is needed to do work.

Now, it would appear that in a sunspot, where first a tremendous magnetic field is produced by the friction of different materials rubbing against one another, and then vast currents of electricity are set up by the whirling of great quantities of matter in this magnetic field, we have a kind of natural dynamo of the most gigantic power. Something of the same kind appears to occur though on a relatively very small scale in a volcanic eruption, as of Vesuvius, when electrical currents are set in motion and tremendous discharges of lightning occur.

Thus, it is not difficult to account for the fact that the sun, when disturbed by the outbreaks of great spots, becomes a centre of immense electrical disturbance. But the question is, How is this disturbance transmitted to the earth? The current produced by a dynamo is led away by wires, but there are no wires between the earth and the sun.

That the solar disturbances extend to the earth and extend to the earth at a distance of 93,000,000 miles, or that this field should act upon the earth by induction at such a distance may seem incredible. But the difficulty may be explained in this way:

The experiments which led to the invention of wireless telegraphy have taught us that when an electric discharge takes place, as when a spark is caused to leap from a conductor, electric waves are set up in the ether which spread away on all sides with the velocity of light, 186,000 miles per second. The electric waves that we are able to produce travel thousands of miles in the fraction of a second.

Now, it is known that in and around sunspots tremendous electrical discharges must frequently occur, incomparably more powerful than any we can produce with our earthly instruments. And some of these solar outbreaks have been caught in the act of darting their waves to the earth.

Everybody has heard of their fiery lights, of the aurora borealis, and many have seen these strange phenomena, even here in New York. Around the magnetic poles of two

earth they are of constant occurrence, but they become visible in the temperate zones only when the earth's magnetism is greatly and violently disturbed. Such disturbances generally occur coincidentally with some sudden outbreak around a big sunspot. In fact, it has now come to be recognized that the association of sunspots with the

aurora borealis is of the most intimate character, and that whenever the average number and size of sunspots increases, as it does periodically about every eleven years, the number and brilliancy of the aurora borealis increases also. When the number of sunspots is small, the aurora borealis is of the most feeble character, and when it is large, the aurora borealis is of the most intense character.

Thus, it is not difficult to account for the fact that the sun, when disturbed by the outbreaks of great spots, becomes a centre of immense electrical disturbance. But the question is, How is this disturbance transmitted to the earth? The current produced by a dynamo is led away by wires, but there are no wires between the earth and the sun.

That the solar disturbances extend to the earth and extend to the earth at a distance of 93,000,000 miles, or that this field should act upon the earth by induction at such a distance may seem incredible. But the difficulty may be explained in this way:

When the number of sunspots is small, the aurora borealis is of the most feeble character, and when it is large, the aurora borealis is of the most intense character.

The Most Remarkable Photograph of Sun Spots That Has Ever Been Made

This picture was taken at Mt. Wilson Observatory, California. It shows a sunspot, a dark, irregular shape on the sun's surface.

Thus, it is not difficult to account for the fact that the sun, when disturbed by the outbreaks of great spots, becomes a centre of immense electrical disturbance. But the question is, How is this disturbance transmitted to the earth? The current produced by a dynamo is led away by wires, but there are no wires between the earth and the sun.

That the solar disturbances extend to the earth and extend to the earth at a distance of 93,000,000 miles, or that this field should act upon the earth by induction at such a distance may seem incredible. But the difficulty may be explained in this way:

The experiments which led to the invention of wireless telegraphy have taught us that when an electric discharge takes place, as when a spark is caused to leap from a conductor, electric waves are set up in the ether which spread away on all sides with the velocity of light, 186,000 miles per second. The electric waves that we are able to produce travel thousands of miles in the fraction of a second.

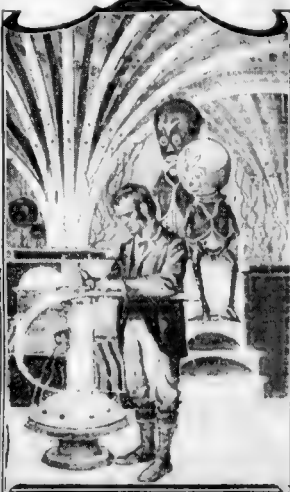

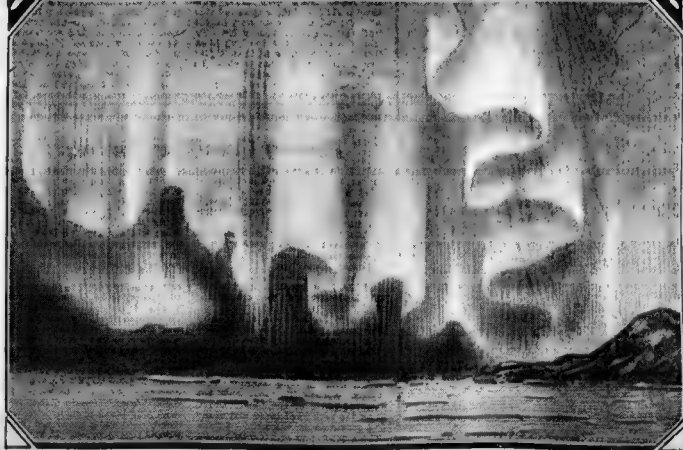

One of the Photographs Taken of the Solar Cyclone Surrounding a Sun Spot. The Leaping Flames Are 100,000 Miles High, and Are a Source of the Magnetism That Affects Our Weather.

rival at certain positions in their orbit, is alleged to exert an influence upon the sun, tending to make spots burst out, the possibility of predictions like those that Father Picard and others have made cannot be denied, provided that we grant their assumptions. Father Picard claims that his past predictions have been verified. To the very date, and he makes another series for May, and suggests that one can be made for June, based on "a great solar manifestation" which a French astronomer has foretold for the month.

In view of these things it becomes highly important to review what the leading astronomers have learned and believe, concerning the influence of sunspots on the earth.

First, what are sunspots? Recently it has been discovered that sunspots are vortices, in which the whirling motion carries matter from the surface outward. They have been likened to water-spouts at sea, the trumpet-shaped part being at the top, and the material within being whirled upward.

Since there is a great variety of substances in the sun such as iron, calcium, silicon, sodium, copper, magnesium, and in short, almost every element known to us on earth, and since these substances are brought into violent frictional contact by the whirling motion, it is believed that powerful charges of electricity are produced in the spots, and as the charged matter is sent around in the vortex great electric

An Auroral Curtain—Wonderful Phenomenon Produced by Bombardment of Magnetism From the Sun.

Imagination in this way: On one side we have the sun in a state of intense electrical disturbance, and on the other side we have the earth, itself a magnetized body, and surrounded by an atmosphere whose electric condition is subject to the influence of the sun. A specially intense outburst occurs on the sun, crossing the 93,000,000 miles to the earth in about eight minutes. A telegraph operator on the earth happens to be seated at his instrument sending a dispatch. Suddenly it ceases to work; then sparks of fire leap from it, and he starts away in alarm. The impulse

Simple Pannier Garden Party Costume, a Bolero Evening Gown, and an Elaborately Embroidered Dinner Gown of Sapphire Net

By Lady Duff-Gordon
"Lucile."

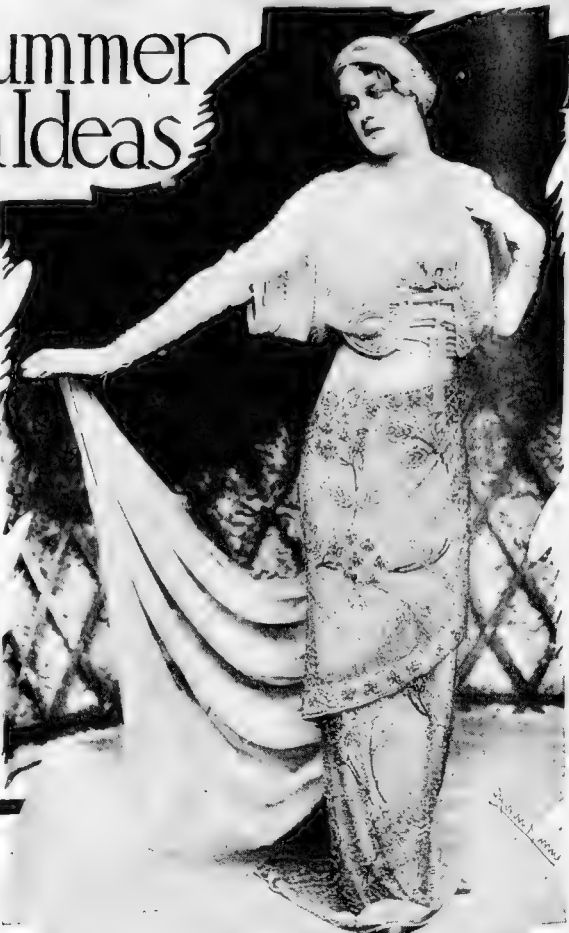

THERE is no doubt at all now that the pannier has come to stay, although at first it was regarded as a revival which would not prove popular. This is not so surprising, however, when it is seen that the mode lends itself to such a dainty treatment as that of the de-

A Lucile Evening Gown of Chiffon Cloth, with Embroidered Band, Ending in Pointed Scallop.

ered band from the knees ending in pointed scallops. The overskirt shows the draped back that Paris favors just at the present. The little bolero is embroidered with gold, and a thick gold cord and tassel outline a high waistline.

More elaborate is the sapphire bl dinner gown shown in the photograph. It is of net, heavily embroidered with turquoise, sapphires and

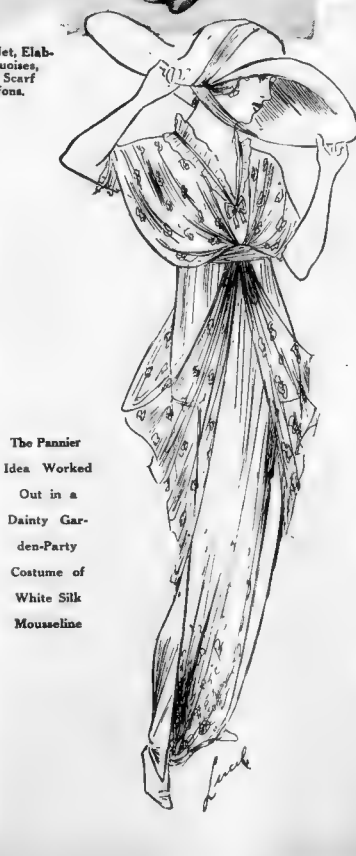

A Lucile Dinner Gown of Sapphire Net, Elaborately Embroidered with Turquoises, Sapphires and Amethysts, with Scarf of Shaded Blue and Violet Chiffon.

embroidery. The violet silk cord is used in this embroidery. The skirt is in two parts. The bodice is distinguished by the net structure, embroidered with a delicate pattern. The skirt, extremely wide kimono sleeves, are treated with the stones. The scarf is of slanted blue and violet chiffon. Still another picture is made of brown shades, in the soft green and brown shades; the coat fairly long with big crystal buttons, two more being in decorative evidence at the waist. The skirt is of the same material, which there holds in the very slight fullness, after the fashion of a man's skirt. The skirt is of the same embroidered lawn of the blue of old ivory, with bordering ruffles of white tulle. The skirt is just as lovely as the bodice, and is extremely feminine and fascinating attitude. While the skirt is just as lovely as the bodice, and is extremely feminine and fascinating attitude. While the skirt is just as lovely as the bodice, and is extremely feminine and fascinating attitude.

It is a delightful example of the demure simplicity, which, when thus judiciously combined with the most almost daring and entirely successful, while then again a certain cool Shantung silk depends for its effect on the contrast of the red and cut and the deft placing of just a few seldom braided ornaments and pendant tassels.

Now, if you may prefer a white serge, whose coat is of the straight close cut, with which those of the more elaborate and costly model are already familiar, this one, however, being broadly bordered where it fastens round the hips with the same red and white striped silk. There is a collar, too, which is out of the lined narrowly with black velvet, and a button of rose-bred enamel, either curved corner, the longer revers being of fountal silk, whose pale gray and white stripes are several shades of rose and blended with some quite beautiful

All this for the beautifying of the coat, while on the skirt there is not even one button! But there its cut is quite perfect, while as the worthy companion of this ideal Summer tailor-made there is a white straw hat, underlined with old rose silk and upturned jauntily at one side, where, too, there is poised a bird of spotless white plumage.

No, 176---Out of Doors the Greatest Cosmetic

By Mme. LINA CAVALIERI, the Most Famous Living Beauty

Mme. Lina Cavalieri

IF you are not an out-of-door girl Mme. Cavalieri suggests that you become one this Summer. In a most timely article she points out the values of various out-of-door sports for women, tells how to acquire training in them, and what dangers to avoid in their practice. She answers an oft repeated question in her correspondence: "How shall I develop my limbs?" With "Football" an excellent developer of the legs. "Her kindness and tact are shown in this bit from her discussion on golf: "Beginning your practice early in the morning when there are few players about, so that you will not be disconcerted by watchers and critics."

By Mme. Lina Cavalieri.

Questions Answered

application is not successful make another in a few days. Meanwhile use cold cream plentifully on the face.

Leona wants to know what will cause her eyebrows to grow, and what will promote hair growth. I would like to surprise you, Miss Leona, to learn that what develops one will probably develop the other. If you will use the cold cream and refuse to grow, though you have used vaseline on them for months, I should say you will never grow any hair. If you build a house, it will make the eyebrows grow. I will also develop the bust. Spend as many hours out in the sun as you can. Eat nourishing foods such as beef, lamb, mutton, chicken, as rare beef and green vegetables. Sleep a great deal. Perhaps you will say, "Physician, give me a prescription." To a partial milk diet may result in a new blood supply. Breathing deeply will be a great help. If you are in the grip of your hair, I am sure it is a sign that your con-

stitution is "run down" just as a pair of shoes becomes "run down" at the heels, or the hair itself is neglected. Are you sure that while you have been anointing your eyebrows with vaseline you have kept them well brushed to free them from dust? If dust works its way about the hair roots it is sure to choke them and eventually to make hair fall out. Massage your eyebrows gently while patting in lanolin.

H. M. F. writes: "Will you kindly inform me through your beauty column how I can darken my hair? It is brown, but I am very desirous of black hair. I would like something that will not injure my hair to any great extent."

My dear H. M. F.: Don't. Practically all hair dyes are injurious except henna.

Be content with your dark brown hair. Massage the scalp well every day. Brush your hair vigorously daily, and as the hair increases in vigor it is likely to grow darker.

Wrinkles Go Quick

Beauty Doctors and the Medical Pro-
fession Stand Aghast in Amusement,
Marveling at this Wondrous New
Method of Removing Wrinkles,
Which Has for Ages Unified the
Leading Experts of
the Earth.

WRINKLE BOOK FREE

This book is only for persons who wish to remove their wrinkles. No sent to children or curiosity seekers.

THE PRINCESS TOKIO
New Method of Removing Wrinkles.

Send Quickly for This Great Wrinkle
Book and Start at Once to Re-
move Your Wrinkles.

Did you ever see a Japanese woman with a clouded complexion? Did you ever see a woman with a face of five or six ages? Then learn how to achieve and maintain that illusive youthfulness in America the Princess Toki knows. Her methods are being made known, and the secret of her beauty is being revealed. You have Christian women who are able to give the secrets of their beauty to beauties, who have faces and forms that have been the marvel through the ages. But they are not willing to tell their secrets, locked, and there is not before you an American lady who writes immediately to you, and tells you the secrets of her beauty.

The Princess Toki Wrinkle Book is a message full of utterly feeling and feeling, and it is a book that tells, without hesitation, all about the Princess Toki new method of removing wrinkles, freckles, blemishes, spots, patches, lotions, or plasters, or mechanical

cal appearances. "I have been all over America proving conclusively the wondrous excellence of this remarkable new treatment and it is simply astonishing the thousands of letters being received from grateful women. My latest letter to-day from Mrs. F. E. Campbell of Dallas, Texas, is a testimonial for two weeks and her wrinkles are all gone, and she further states that her face is as smooth as it was when she was a girl and that she is so happy. That states she used my treatment in praise of this remarkable new treatment.

Ada Colville of Texas states that she used the treatment eight days and has found it so beneficial that she has found she is so delighted that she has found something that will keep her young

A letter just received at this office from Mrs. A. L. Morran, who lives in Canada, states that she was delighted with this new combination wrinkle treatment. That it removed all her wrinkles and leaves the face smooth and radiant and makes the skin fresh and young looking.

Mrs. E. W. Jones in her letter states "The Princess Tokio Wrinkle Treatment is excellent." She further states that it not only removed her wrinkles but made her skin soft and smooth as velvet, and that she never before found a remedy which would make her young-looking, and that she is in Chicago and New York treatments were given.

Princess Tokio Wrinkle Treatment

The first reason this book is free to every woman, is that you have never twenty years of age. In these there are two fortitude eternal. You have never twenty years of age. A young girl is it impossible to benefit this. It is a good after twenty years of age. It is a good after twenty years of age. It is like a girl again! If you are fifty years of age, you would wish to look like a splendid woman of twenty-five. If you are forty, would you like to look like a girl, young and beautiful to you this book will be of inestimable value. Keep that in mind. There is no charge for this book. It is free to every woman. It is free for bride writing to learn of the new way remove wrinkles and regain a youthful face.

SEND NO MONEY.

Under no circumstances will money be accepted for the Princess Tokio Book about wrinkles. It goes about the world, and is not sold by a peddler, a wilding hand, by one who believes that there is a law, the most splendid day for America's women of all ages, to get rid of wrinkles, to get rid of the most costly and cheer, and so unlike any American, it is a treat in its own instruction. All you need to do, is in need and ask for a PM, and you will get it. It is a book, and is a book, 1917, Central Bank Building, Denver, Colo.

You may rest assured that this book will be a in a plain wrapper.

It is how to remove every wrinkle by eating new treatment in only eight days.

4. No Arrangements have been made
whereby all our readers may receive a
book, and a book, and a book, and a book,
and a book, and a book, and a book, and a book,
in need of a quick wrinkle remover.

**Four Up-To-Date
Designs for
The Home
Dressmaker
Easy To Make.**

No. 9190—Blouse with Tuck.
This blouse may be worn without the
tucker and finished without the
bugare portions.

No. 9191—Girl's Dress, with Tuck.
The waist portions are shaped pre-
tightly over the yoke, and the Gibson
plait gives the necessary breadth and
fullness. The pattern, suitable for vel-
vet, corduroy, silk, woolen or wash
fabrics, is cut in four sizes—8, 10,
12 and 14 years. It requires 3 1/2 yards of
44-inch material for the 10-year size.

No. 9192—Boy's Suit.
This design is suitable for linen, gal-
lies, madras, gingham, flannel, vel-
vet or corduroy. The pattern is cut in
four sizes—8, 10 and 12 years. It re-
quires 4 yards of 28-inch material for
the 10-year size.

No. 9214—Ladies' Tucked Shirt Waist.
The one here illustrated is made with
two tucks over the shoulders.

To obtain any of these desirable pat-
terns, fill in the accompanying coupon
and mail, with 10 cents for each in ad-
vance of stamps.

GOOD HOUSEKEEPING MAGAZINE PATTERNS

**A Summer
Afternoon Frock &
Two Fashionable
Blouse Models—
at Reduced
Prices.**

No. 136
Never before have hand-cut patterns
been sold at the low prices offered by
GOOD HOUSEKEEPING MAGAZINE.
In order that all women interested in
good-looking clothes may have the op-
portunity to purchase the **GOOD HOUSE-
KEEPING PATTERNS**, the prices have
been reduced a half. The pattern of a
complete costume now sells for 25 cents
instead of 50 cents, and the pattern of a
sleeveless jacket for 15 cents in-
stead of 25 cents.

No. 135—The Norfolk Tennis Blouse.
For golf, tennis and other athletic
sports the Norfolk blouse is a boon.
It gives to the wearer the comforting
knowledge that she is perfectly parting of
waist and skirt is possible.

No. 132—Summer Afternoon Frock.
This model shown in the illustration
T may be fashioned from tulle, four-
fold, full, crepe, serge or linen.
The pattern is cut in ten pieces. The
skirt is circular, slightly gathered at
the waist, and with a seam over the
hips. The blouse is joined to the waist
line underneath the belt. Five yards of
28-inch material is required and 21
wooden moulds for buttons.

No. 133—Dainty Linen Blouse.
To complete a skirt of linen or white
serge a pretty linen blouse is de-
manded. A little hand work often

No. 173
makes these blouses dainty and more
attractive than lace.

For this pattern 1 1/2 yards of 40-inch
linen, 3/4 yard of batiste for the vest
and cuffs and 1/4 yard of 27-inch lawn
for lining is required. This pattern is
cut in four sizes—24, 26, 28 and 30
inches bust measurement, and sells for
15 cents.

To obtain any of these desirable pat-
terns, fill out the accompanying coupon
and mail, with 15 cents in stamps for
each of the blouses and 25 cents for
costume. The blouse and skirt for the
costume may be obtained separately for
15 cents each. Send to

PASSING THE TIME

It Is the Great Problem of Many. They Will Find the Time Passes Soon Enough, and Will Look Back to Regret the Time Passed and Wasted

Time Is Your Only Real Possession. USE IT. It Is Short Enough.

FOUR of us has at the most a few years to spend on this earth.

We spend the first years hoping great things, the next few years dropping illusions one by one, and the last few years regretting the mistakes, he missed opportunities and the wasted time of the whole life. And after that comes the grave, and perhaps a new shuffle of the cards and a new beginning here where we left off.

On this earth, so full of opportunities, filled with wonders, surrounded by the mystery of the infinite, man appears for a second—a second at least in the eyes of infinitude. And during his little second on earth HE ACTUALLY DEVOTES MOST OF HIS ATTENTION TO DISCOVERING SOME WAY "OF PASSING THE TIME."

...

Have you noticed how the people pass the time, how they try to make the hours fly by unnoticed?

They walk into a railroad station. They put a penny in a machine to make it play some foolish tune. Then they listen, passing the time, the brain dead.

They go to a restaurant. They order what they want. Immediately a terrific noise begins. A band is playing, and again the time passes, and again thought is impossible.

They meet each other. They talk certain definite platitudes, weather, baseball, jokes, nothing in particular, and again the time passes—and it passes very fast.

The husband goes home and tells his little trashy story of the day to his wife, and that passes time. And then she tells her little trashy

story about nothing at all—and that passes some more time.

And by and by they go to bed and sleep—and that passes about one-third of all their time.

And so it goes.

...

Men play cards in the train to pass the time. Men lean back and sleep on their way from one big city to another to pass the time. They forget how much time they will have to sleep in the grave; they forget how rapidly the time will pass then. For a man dead, like a man asleep, when he wakes again doesn't know whether a second or a million years have passed.

"How shall we pass the time till supper?" and "How shall we pass the time till so and so comes home?" Those are the questions that modern human beings ask.

...

There are books that need reading, there is thinking that every man and woman and child can do. There are problems that need to be settled. There is work that can be done to develop the mind or the muscle or the character.

There is a good task for every hour, a task that is better for the mind than idle rest, which is death intellectual.

Take any one of the men and women who devote their energies now to "passing the time" and put that man or woman on another planet, on Mars with its great canals, or Saturn with the rings, or Jupiter with the many moons. You could not imagine that human being content "to pass the time." Eyes and ears would be open, all of the senses would be awake, eager to study the wonders of the new and mysterious environment.

There is nothing more marvellous on any planet, at least so far as our intellectual ca-

pacity for receiving impressions goes, than upon this planet of our own.

Every little blade of grass growing, every change of the clouds and the wind, every expression on a child's face, every indication of happiness or sorrow among human beings, is worthy of the earnest attention of a man—providing he is fit to be called a man.

...

There is occupation for every waking second—but the great majority of us when not worrying about our mistakes in the past, or struggling for a dollar in the present, or fretting about an uncertain future, ACTUALLY TRY TO PASS OUR TIME.

For this as a race we cannot blame ourselves. For only since yesterday we have come up from the animal condition, where the brain was little developed, where the mind was nothing and where the muscles and appetite were all. The latest faculty acquired is the faculty most easily fatigued—thought and abstract speculation are our recently acquired faculties.

It is probable that not one man in a thousand, even among the ablest men, is capable of four hours' actual thought in the day. It is probable that the average human being lives and dies without four hours of real thought in his whole life.

It is also probable that you, assuming you to be a good, fair individual, might be capable of fifteen minutes thought per day. If you should try it, the fifteen minutes would soon grow into thirty minutes, and eventually you might be able to spend an hour in actual thought on a problem of importance to yourself and to others.

That would be better than many nickel-in-the-slot machines or many brass bands, better than many bridge games, baseball games and poker games. Better than many hours and weeks of gossip without meaning.

"The day will come, at the best, when you will look back from the edge of the grave to the beginning, years ago, and wish that you could have those years again."

A good book in your pocket, a definite train of thought occupying and interesting your mind—those are the friends to take on a railroad journey, not a pack of cards or a two-legged gossip.

The day will come, at the best, when you will look back from the edge of the grave to the beginning, years ago, and wish that you could have those years again. The day will come when you will long for the hour that you are wasting to-day, the hour that you are "passing," and wish that you had a chance to do what might have been done.

Happy the man for whom time passes all too quickly, and unhappy he who, living with two eyes and two ears and a brain that can read and understand in such a world as this, actually finds it necessary "to pass the time."

EVERYBODY'S DOING IT---By T.E. Powers, the Famous Cartoonist

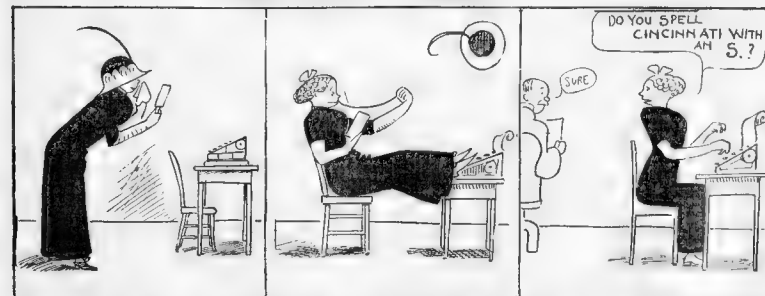

THIS IS MRS. DE PUYSSTERBILT

THIS IS MARY JONES

THIS IS KITTY SMITH

AND THEY'RE ALL DOING IT

HEINE and HONUS—

By Aaron Hoffman

All Stage Rights Reserved by Mr. Hoffman.
Copyright, 1932, by American Journal Company
First Boston Rights Reserved

HEINE—Did you read where on May 22d, the post office begins to send "Air Mail"?
HONUS—"Air Mail"?
HEINE—Yes.
HONUS—What does that mean—campaign literature?
HEINE—No. It means mail by airship. They start in this week sending mail by airplane from Washington to New York. Ain't that great?
HONUS—Wonderful. Only I'm afraid it means considerable "falling off" in post office business.
HEINE—But think how much quicker letters will get to their destination.
HONUS—There is no doubt about that. Letters will get to their destination much quicker, but would the destination they landed at be the same as the one they're addressed to? Can you imagine a flying letter carrier jumping into his airship in Washington and starting off with a couple of thousand pounds of valuable mail? About half way here a storm might come up and he'd have to throw off ballast, and by the time he reached New York all he'd have left would be a postal card.
HEINE—I think it will be great to see our mail airplanes flying all over the country.
HONUS—It will be, as long as we are sure that it won't be our mail that is flying all over the country. When anybody sends me a letter containing some money they owe me I want to be sure that it's delivered at my house. I don't want to have to go out and drag a river for it. The way it is now, when

you put a two-cent stamp on a letter you are sure that it is first-class matter, but with airships you would always be wondering, "Is that's the matter?"
HEINE—I see where Bruce Dismay got a great ovation in Liverpool.
HONUS—You must mean White-liverpool.
HEINE—They treated him like a hero.
HONUS—He is a hero.
HEINE—How do you make him out a hero?
HONUS—Didn't he have nerve enough to go home?
HEINE—Speaking of women, the latest news from Paris says that they are wearing invisible stockings. Do you believe it?
HONUS—Altogether "too thin."
HEINE—That's what they say. Why should a woman wear those openwork stockings?
HONUS—Can't you see through 'em?
HEINE—Yes.
HONUS—That's the reason.
HEINE—But just because they got on high priced stockings, is that why they should wear shorter skirts and lower shoes?
HONUS—Well, they got to cut down expenses some place.
HEINE—There's one big advantage in the invisible stocking though.
HONUS—What is that?
HEINE—If a woman is too poor to buy a pair of stockings she can get dressed, walk out in the street without any and no one will know the difference.
HONUS—Do you think that the women that wear those low shoes and short skirts show good form?
HEINE—Most of them do. Only a little too much of it.
HONUS—I think it's a very pretty style for women.
HEINE—It is. Only it makes the men look down

Heine says, "The new silent milk cans will be pretty tough on the janitor. He won't know what time your milk is delivered, and if he oversleeps himself his family will have to go without it."

on 'em.
HONUS—My objection to them is that they are dangerous when a woman gets on a car.
HEINE—How's that?
HONUS—I saw one getting on a car yesterday and my neck hurts yet.
HEINE—That is why they are putting on those "stepped" cars.
HONUS—I saw one of those steplike cars the other day, but the street car company don't seem anxious to use them.
HEINE—No wonder. They're on the level.
HONUS—I use the 'bus now when I go down town. They let the passengers smoke on top.
HEINE—But the trouble is they let the machines smoke all over.
HONUS—Did you ever ride in one?
HEINE—You don't ride in 'em—you bounce. The only way you can finish a ride in the same seat as when you started is to strap yourself to the seat. When you get on the 'bus you sit all alone on the back seat; it starts, and before you have gone a block you are sitting in the lap of a lady in the second row. And before the conductor can come and bounce you, you have bounced yourself over into another seat.
HONUS—But think of the fresh air. You sit on the top of the 'bus—fill your lungs with ozone. It makes you feel proud, it makes you hold your head up.
HEINE—And if you do hold your head up you pass under an elevated road and it knocks it down again.
HONUS—I tell you it's a great pleasure to ride in a 'bus. For ten cents you ride in your own automobile, while other automobiles are swishing by—
HEINE—And the branches of the trees are swishing in the eye.
HONUS—Don't they see fast?

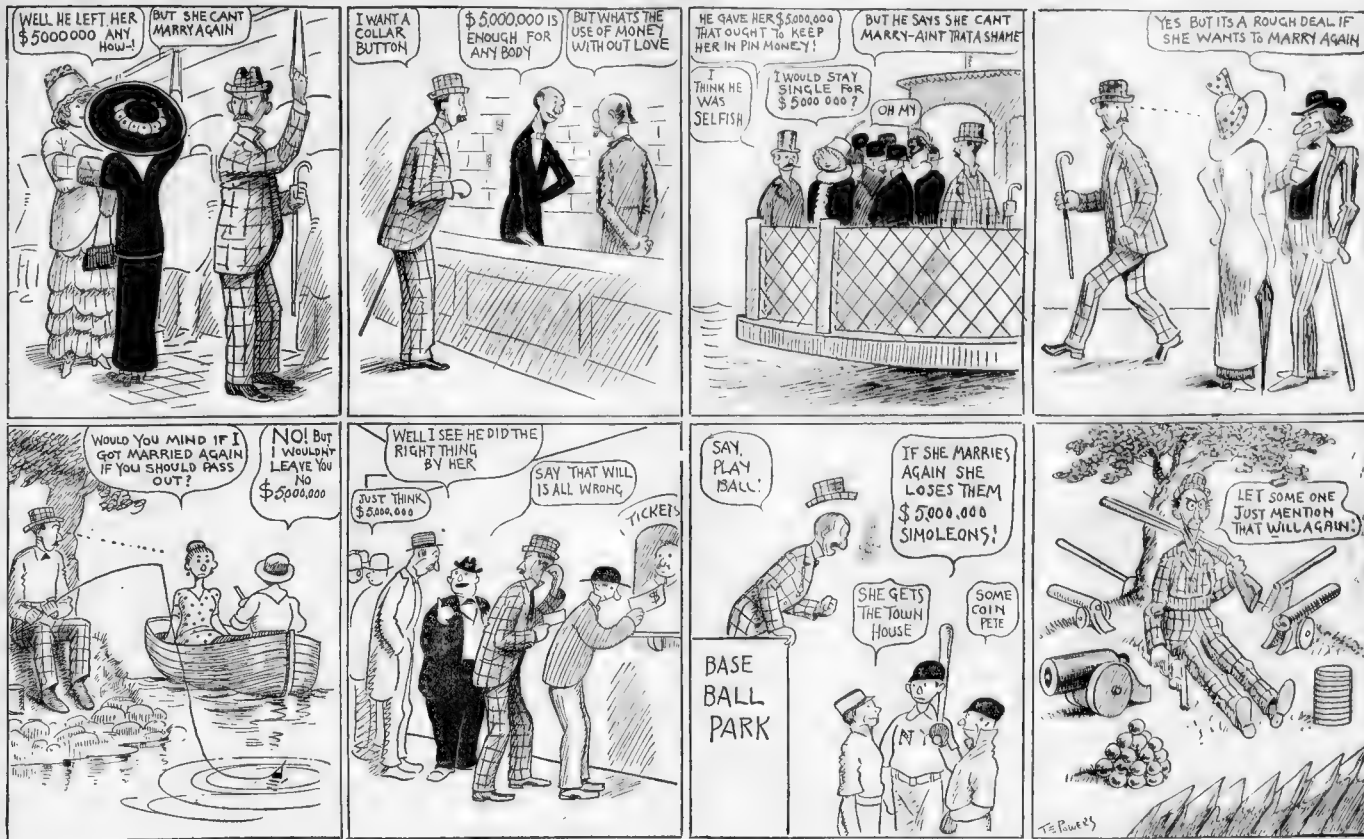

HEINE—You bet. I got in one the other day at Grant's Tomb and six people started walking at the same time. And would you believe it, only three of them beat us down town.
HONUS—Do you know what model those cars are?
HEINE—I think they are of the vintage of 84 B. C.
HONUS—But it's wonderful how science is improving things. Look at Professor Blake, of Harvard. He is getting a lot of his brother scientists together to do away with all noise. He says "pretty soon we will have a noiseless world." And it won't be long before we will read in the paper where Professor Ivorynob has invented a silent milk can that can be delivered at any hour in the morning without arousing a soul.
HEINE—Won't that be pretty tough on the janitor? He won't know what time your milk is delivered, and if he oversleeps himself his family will have to go without it. What I think the professors ought to invent is a noiseless hurdy gurdy, a hurdy gurdy that can stand in front of your house for hours and you won't even know it's playing.
HONUS—That would be an unfriendly act to Italy. The hurdy gurdy grinder couldn't make any money.
HEINE—That's where you are wrong. The people would pay them more.
HONUS—If I was a noiseless Professor I would shut myself up in a room and figure out how to invent a cryless baby, so you could leave a pin sticking in him all night and he couldn't say nothing.
HEINE—That's a good idea. But, believe me, when the professors get together, there's one thing they will have to invent first before they can make this a noiseless world.
HONUS—And what's that?
HEINE—They will have to invent a way to gag Teddy.

THE TRIBES OF NORTH AMERICA

THE HIGH BROWS

THE RETURN OF HAROLD HANGOVER

Copyright, 1912, by American Journal Company. First Edition. All Rights Reserved.

By LEWIS ALLEN.

"O" If mercy, Percy, look what's here! Poke it and see if it is alive.

Inasmuch as a shade of annoyances passes over its almost human features, let us take it for granted that it is alive, but doesn't know it.

A most peculiar personage, this, with brow as alabaster as a corn starch pudding and as corrugated as a wash-board. It is a Highbrow. Indeed, no less than a Highbrow, a member of a peculiar North American tribe. It is not a large tribe, but it feels large.

A Highbrow is a person so highly educated that it makes him peculiar to conversation in less than four-fifths words, and he actually sobes when he tries to think in anything except the dead languages. Do not mistake a highly educated gentleman for a Highbrow. A highly educated gentleman is a human

being fortunate enough to have acquired considerable learning. When you ask him the time he glances at his watch and says "Ten minutes past twelve," and he smiles and acts as though it were a pleasure.

Ask a Highbrow what time it is. He will pause, shudder, come out of his daze, draw forth his watch, consult it carefully, then say: "It is—ten and a fraction minutes after the meridian." You are so stunned you say "Thank you." The Highbrow scowls and hurries on, you turn around and look at the town clock and mutter: "The darn liar, it's only ten minutes past noon!"

The ordinary Highbrow is a most useful person. He keeps us satisfied with life and with ourselves, no matter what our condition. At the breakfast table he says to the maid: "Mary, there's a considerable, quite a considerable quantity, an excess, I might say, of sediment in my coffee."

Mary promptly gets red in the face and declares he must be wrong, she hasn't used a bit of sediment in the kitchen since she had been there, and as for sediment, she never uses anything but straight coffee. Then she gives her notice and quits.

The Highbrow can tell you all about the intercontinental fauna zones and why the cobolides fauna, which was endemic in Eurasia, differentiates from the Mantecobolus faunae of the Upper Devonian. He can also tell you right off the bat without the blink of an eyelash (if he were warm blooded enough to have eyelashes) why the psychopathic diathesis from closely related ancestry is stultically descended upon an individual from remote kindred.

He certainly tells you those things just as easy, but he won't tell it to you in such short words as I have given it here. But if you ask him how soft soap is made he will probably tell you he thinks hard soap is parboiled and then pounded soft with a mallet. Or you may ask him if he has heard the latest scandal, and he will tell you he thinks he has and that it relates to that distressing affair between Paris and Helen of Troy.

The Highbrow can tell you very readily what to do in a case of violently paroxysmal traumatic or even idiopathic epilepsy, but if you ask him to fix the furnace he would probably put the coal in the ash box and leave the doors and dampers both wide open.

A Highbrow is about as useful in the average household and office as a celluloid gargoyle on the corner of a smelting oven.

The next time you see a individual going about looking as though it were perfect torture to live and breathe the ordinary plebeian atmosphere along with us submerged ten million or so, when you see him reading something that looks like fine Chinese laundry check mottos (merely ancient Greek); when you hear him murmuring to himself as he gazes into space something about the psychology of the comma—just watch him a few minutes longer, then go around the corner and have a good giggle.

For you have seen a Highbrow!

Copyright, 1912, by American Journal Company. First Edition. All Rights Reserved.

It was high noon in Oshkosh, Wisconsin. The dew had gone from the grass and the roosters had long ceased their morning yodels.

Down at the station, where the train comes in, a multitude of Oshkosh's best citizens were congregated. In their midst stood a tall, handsome youth—a boy who towered above the friendly neighbors as a Norway pine towers above a spruce. One glance at his manly form, one glimpse of his freckled yet virile face—and every one knew that it was Harold Hangover, the great Oshkosh pitcher, inventor of the famous "snecoo ball."

Harold ventured the aidman from our hero's ward, edging nervously toward the stalwart pitcher, "us folks so powerful sorry to see you go. You have been here all winter, and it is hard on us all to see a boy like you leave the town. We ain't much here on book any more. Harold, but we sure do know a big man when we see one, and it has been a pleasure for us to have a fellow citizen that used to pitch for John J. McTraw and who is going back to him to help pitch the Giants to another pennant. And now, as you are about to leave us, as you are about to leave for New York, the city of all cities, we would like to present you with a slight token of our esteem. We want you to understand that this little gift which we have clipped in to buy for you is a gift that has no great intrinsic value, but it represents the loving thoughts of your fellow citizens and your friends, and we know that every time you bite into it you will think of the home folks—the folks that will cheer you on to greater efforts and will take you back to our arms if you should chance to be a failure. Now, Harold Hangover, on behalf of his fellow citizens and myself, I wish to present you with this handsome pound plug of Virginia tobacco."

A brief silence followed the speech of the aidman and then Harold Hangover spoke:

"My friends," he said, gulping so violently that his Adam's apple nearly broke his collar, "my friends, I hardly know what to say on this auspicious occasion. I know you all as you stand here. Most of you I have known since childhood. This is one of the proudest moments of a life that has had few proud moments. I might say that this marks an epoch in my career.

"Friends, a city can't wear away a boy's affections from the friends of his childhood. The friends that you meet in city are as false as a butterfly. Today they are with you, tomorrow they have moved to Jersey. But it is different here in my dear home town. Here they take a man for what he is worth, and I shall never forget my happy Winters spent in the city where my father and mother lived for so many years. All of you boys know—don't you boys!—that I never violated an obligation or crossed a friend."

A slim little chap of perhaps fifty, edged through the crowd until he got to the side of Harold Hangover.

"I heard that last part of your speech, Harold," he said gently. "Don't you reckon that before you go you could come across with that ten I lost you three weeks ago?"

OO Gies, the gateman at the depot, says he wishes the logical lodge of suffragettes would return his ticket punch. He loaned it to 'em to punch the score cards of the guests at a public encire they were giving. He's getting tired of punching the committee's tickets with a lead pencil.

The strong man with the circus was unable to do his turn the day the show played here, as he strained his back trying to raise a car window on the train travelling to this place.

As the Mormons say out in Utah, what is one home without another?

A hen makes a lot of noise when she lays an egg, but it is not a circumstance to the fuss a man makes while he is laying a carpet.

Hipe Oronk asks us if people living in Bayonne, N. J., are called Bayonettes. We'd hardly like to say that, Hipe, but there are some pretty sharp people living there.

There is a fortune awaiting the inventor who will perfect a storage battery bill at the grocer's which will run six months on one charging and six months more after being recharged.—Ads.

That might not be bud the two apparatus of the Republican Presidential nomination are fitting, but it is at least a good working model of Croton water.

Why is our St. Panastella like an upright, religious colored gentleman? Because it is a good smoke. Try one. Mixen, the Main Street Drugist.—Ads.

Words and Their Meanings

Copyright, 1912, by American Journal Company. First Edition. All Rights Reserved.

DAMSEL—Merely younger than a dame.

DANK—A poet's idea of a fine way to say "wet."

DARK—A handy time for burglars, lovers and other freaks.

DARLING—A word most frequently used when we don't mean half we say.

DARN—A V. M. C. A. substitute for a bigger word.

DARWINIAN—A theory that is used as an excuse for many monkey shins.

DATE—Bitter-sweet fruit from the garden of love.

DAUB—A work of art if it made 500 years ago.

DAVENPORT—A bed so modest it disguises itself during the day.

DAY—When most of us would sleep if we could afford it.

DAWN—Color "gray" temperature "cold." When following the night before.

DEACON—A man who does not let his right hand get wise to what his left hand is doing.

DEAL—Something square, that certain candidates are not shouting so much about this year as usual.

DEAR—Expensive; e. g., a sweetheart or wife.

DEBT—A hole wherein you are apt to fall back two steps every time you climb up one.

DEBIL—Bluff one usually finds decorating the mantel.

DEBUTANTE—A young woman who has succeeded in coming out, as can be told at a glance by her gown.

DECANTER—A domestic life-saving apparatus.

DECOLLETE—Half way back to nature.

TO FILL BALCONIES OF OPERA HOUSE

New Method of Selling Tickets
Assures Large Audiences
Next Season.

The spectacle of empty balconies at performances of grand opera in this city will never be seen again according to Business Manager McDonald of the Boston Opera House.

The new method of subscription by which the \$1.00 seats are sold at 50 cents if purchased by subscription, and of the eighteen performances last practically sold out second balcony for the entire season for the first time since the opera house opened.

With the entire opera house sold out for all subscription performances, the balcony front heavily subscribed, there was practically no chance for the opera house to sell out the balcony for the first time since the opera house opened.

The assured income from subscriptions according to the business manager, is a ready greater than it was in November of last season, and this does not include the sale of boxes the price of which have been doubled and which will increase the receipts of the opera house by \$70,000 a year.

The guarantee fund of \$100,000 required to secure more than \$100,000 in subscriptions is no longer any doubt that it will be furnished and will be a great help to the opera house in its financial straits.

It is estimated that with the increased price of boxes the opera house will have a subscription list of more than \$400,000 next season and a financial guarantee fund of \$100,000. And to this the box office receipts which last season were more than \$200,000 and the income from outside performances, concerts, etc., and the Boston Opera will have a total available resource of close to \$700,000 a year.

It is desired, however, not to exceed a budget of \$700,000 so that a guarantee fund may be kept intact and returned to the contributors.

Director Russell is now established in Paris where he is a large holder of opera shares, and is expected to return to the opera house in the autumn.

MARY YOUNG,
IN "NIGHT OFF," AT
THE CASTLE SQUARE.

By NICHOLAS YOUNG.

THEATRE managers are entering how the new advertising law will affect the announcements of plays. The law has been passed in New York, and while under the prevailing style of advertising would be billed as having the "original New York cast." Plays that have enjoyed extended runs in New York seldom go on the road with their original players, and yet it is the custom to announce these plays as having the New York company. A strict interpretation of the new statute would make it unlawful to announce or advertise a play if even a single minor character were not of the local engagement. While the new law is aimed at theatrical advertising it is nevertheless a great deal of misrepresentation as has been carried on in many public announcements of plays, and if under the new order of things this is prevented the law will be helpful. It is naturally assumed that under the new regulations we shall have no more \$1,500,000 moving picture and vaudeville theatres, a valuation that on the face of it is ridiculous, but which many unthinking persons may have been led to believe is correct. When a theatre manager stretches the valuation of his property to \$1,500,000 in his advertising, when it is apparent that the rent of property of that value would be prohibitive, it is time that the law makers interfere for public good.

CHANGES in the lineup of Mr. Morison's company at the Majestic Theatre have already been announced, and the week just ended has seen the addition of Howell Hansel to the cast. Hansel is a popular player who will be seen under Mr. Morison's management this Summer. Mr. Hansel is a popular player in Boston, and while his fortunes have taken a dip in the last few years he is still well enough remembered to prove a valuable asset to the organization. Another announcement by Mr. Morison carries the information that Miss Eleanor Gordon will place at the head of the company. This will be a new face to countless friends who have followed Miss Gordon through several seasons of success in local stock work. Miss Gordon will return to Boston ripened with an experience gathered in Otis Skinner's company, which has made "Kismet" the sensation of the year in New York.

IN spite of threats and entreaties Mr. Morison sticks to his determination to present "The Typhoon" at the Majestic at an early date. There appears to be a feeling that the playing of "The Typhoon" may bring about legal difficulties, such as followed the production of "The Devil" a few years ago. Mr. Morison, however, declares that he is within his rights, and that "The Typhoon" will be given without any unusual excitement.

MAUDE LAMBERT

FRANCES WOODBURY, IN
"THE LIGHTS OF LONDON," AT
THE MAJESTIC.

PHYLLIS SHERWOOD, AT
THE PLYMOUTH.

THE important theatrical event of the coming week will be the Lamba gambol, which will be held next Friday evening at the Boston Opera House. Only one performance will be given in Boston. The gambol this year will bring a majority of the big figures in the drama to the city, and they will be seen in a special entertainment of a character that only an organization like the Lamba Club could build. Not only will the company be made up of the best known of the leading players of the country, but the list will include the most conspicuous of our successful playwrights and managers. A Lamba gambol is always an event of importance and judging from reports from the front this season's entertainment will eclipse anything of the same nature ever thrown open to the public.

AMIGHT have been expected the Rainey African hunt pictures have caught the public fancy. These pictures are so unusual that they have the drawing power of a first class theatrical attraction. When it is considered that to produce these pictures Mr. Rainey was compelled to spend about \$250,000 some idea of the remarkable nature of the films may be grasped. More than mere entertainment these pictures have a scientific interest that urge public attention. They are particularly interesting to children, for they show the wild animals of Africa in their natural condition in the jungle.

THE gorgeous spectacle of the Durbar, as presented in Kinemacolor last Thursday night at Tremont Temple, proved a source of inspiration such as is seldom, if ever, provided by motion pictures. The results obtained by this new process are remarkable, representing as great an advance over the black and white films as these in their turn do over the old "stereograph." The colors of nature are reproduced with an accuracy which is astonishing; the hues are comparable to those attained by the finest methods of three-color printing. Much of the success of the pictures placed under the open sky, in the strong tropical sunlight of India, offered a unique opportunity for the photographer, and the vivid pageantry of the celebration, together with its gorgeousness and infinite variety, produced a continuous series of effects that were kaleidoscopic in their richness and novelty. The pictures taken by the Kinemacolor photographers were made by special command of the King, and every opportunity was permitted to make them as complete and perfect as possible. The result will not disappoint anyone's expectation.

WHILE Mr. Craig's season at the Castle Square Theatre is drawing to a close, hastened by the forthcoming trip of his company to Europe, where "The End of the Bridge" will be played, he is planning for one important week with "The Climax," a play that has had more than average success in the past two years. In his production of "The Climax" Mr. Craig will draw upon the original company for one of the characters. Mr. Carney Christie, who was a member of the company sent on the road by Joe Weber, will be found in his old role in the Castle Square production. Mr. Christie, who has joined hands with Mr. Craig on numerous occasions, will play Pietro Golfanti, the pianist. "The Climax" has never been given in stock in Boston.

"HANKY PANKY," which has established itself as the best hot weather entertainment in Boston has had for many years, is gradually outliving its competitors at the other theatres. With "The Fascinating Widow" now on its final week, and the announcement from New York that "The Spring Maid" will soon

be succeeded by "Little Miss Fix-it," it looks as if "Hanky Panky" will be more than able to hold its own at the Shubert for some time to come. The peculiar and particular qualities that contribute to make a successful Summer musical show are found in large measure in "Hanky Panky." These qualities are difficult to define, beyond the fact that they are principally girls, music and nonsense. You have all of that and more in "Hanky Panky."

THE announcement that "Little Miss Fix-it" will tempt fate and the high temperature at the Tremont next month, recalls that a few years ago that theatre was the logical and only established first-class Summer theatre in the city. Musical plays first-class Summer theatre in the city. Musical plays could then live happily through July and August at the Tremont. For the last few seasons, however, even the Tremont has not been able to keep its doors open in hot weather. This has been due, perhaps, more to the mediocre style of entertainment supplied rather than to any other cause. It will seem like old times if "Little Miss Fix-it" moves into town for an extended stay.

[illegible]

not expected to be seen at any social functions for some time. Her beautiful house in Grosvenor square is shuttered. A big corner house in the same square, owned by Mrs. James Henry Smith, is closed for the season. Mrs. Smith is spending the

IS NEW ENGLAND'S "PRINCESS" *HERE?*

The photographs as indicated by the numbers are: 1, Anna Morris; 2, Edith O'Brien; 3, Helen Furusaker; 4, Belle Campbell; 5, Francois Renall; 6, Jennie Ostreicher; 7, Mabel L. Bennett; 8, Belle Norris; 9, Lillian Eckberg; 10, Jennie Dugan; 11, Maura A. E. Whelan; 12, Lucy Burke; 13, Anne Toman; 14, Victoria Tattle; 15, Anne Fox; 16, Edith Gould.

Here are some of the "Princess" Contest candidates, such a question, but the public can. Majority opinion of New England women are asking for suffrage! Well, ladies, here there will be more next Sunday, also each candidate's vote ways rules—or should—AMERICAN readers can choose their you have it! And with it the chance to help 300 of your own favorite among New England's fair ones and vote, vote, vote sex. As for the men, they will, of course, exercise their vote privilege. They know the value of the ballot.

Only three weeks left in which to elect the "Princess of —pile up such totals that the popular decisions will be un- all New England"! Three hundred of our prettiest girls are questioned. The ballot is in today's AMERICAN—on Page 2— asking for your votes, readers! Have you selected your use it now and help some pretty New England lassie to win the Price List will be found on another page of today's favorite? Is your city or town represented? The plan is the "Princess" Outfit offered as a prize or one of the coveted AMERICAN. Select a candidate and give her your support, simple! The AMERICAN wishes to find the 300 prettiest vacation trips offered. Three hundred girls will be elected If your city or town is not represented in the list, write, girl in all New England—judges could not agree on deciding prize winners, so that no one should be disappointed. New phone or call and give her name and address to the Princess Editor, No. 5 Winthrop square, and get her name in next Sunday's list. It's not too late! The contest is only just started! Glance over this prize list and do a body turn to some New England lassie. Today's coupon comes! Get all you can!

The coupon appears in the AMERICAN—July and Sunday!

Help the AMERICAN to find the 300 prettiest girls in New England. It's up to the public! Vote! Vote!! Vote!!!
